UNLEASH
THE PWR OF
YR TAP WTR

Welcome

to local tap water with a difference.

Forget the plastic and water shipped in from the end of the world.

Enjoy great-tasting filtered water at your kitchen table.

Fresh, flowing water to quench your thirst and upgrade your experience.

Water that's kind on the planet and big on pleasure.

Welcome to water inspired by technology and simplicity.

Sometimes sparkling, sometimes still - always fresh and never boring.

Water that fosters well-being and enhances your healthy lifestyle.

Water with meaning, water with style.

Water that changes the world drop by drop,
with financial support poured into environmental protection.

Water as unique as you are.

WTR

WATER WITH A CONSCIENCE

Zero plastic. Zero waste. Zero unnecessary transport.

And if that wasn't enough, we're a 1% For The Planet partner too, pouring 1% of our revenue into water-related projects in each country we are. We provide a little helping hand to local water projects run by passionate professionals striving for just the kind of environmental revolution we support. An eco-friendly philosophy lies at the very core of what we do, and we plan on keeping it that way.

As firm believers in the importance of protecting our oceans and forests, helping build a more sustainable future, and working together to tackle climate change, BE WTR offers up a solution to 9 of the 17 UN Sustainable Development Goals. We're actively seeking Certified B Corp status as part of our unwavering commitment to meeting the highest of environmental standards, and ensuring total transparency and accountability: as clean and clear as our water in our quest to strike a balance between profit and purpose.

DRINK LOCAL

YOUR CITY: YOUR WATER

Whether you were raised on it or learnt to love it as your own, your water is brimming with unique heritage and flavour just waiting to be discovered.

It's common knowledge that despite the great work public authorities carry out, there are potentially still micro-pollutants and teeny-tiny traces of bacteria lingering in your water. The last few metres of piping mean there's no guarantee your water will be in tip-top shape by the time it lands in your glass, as old or ageing pipes lead to metals soaking through.

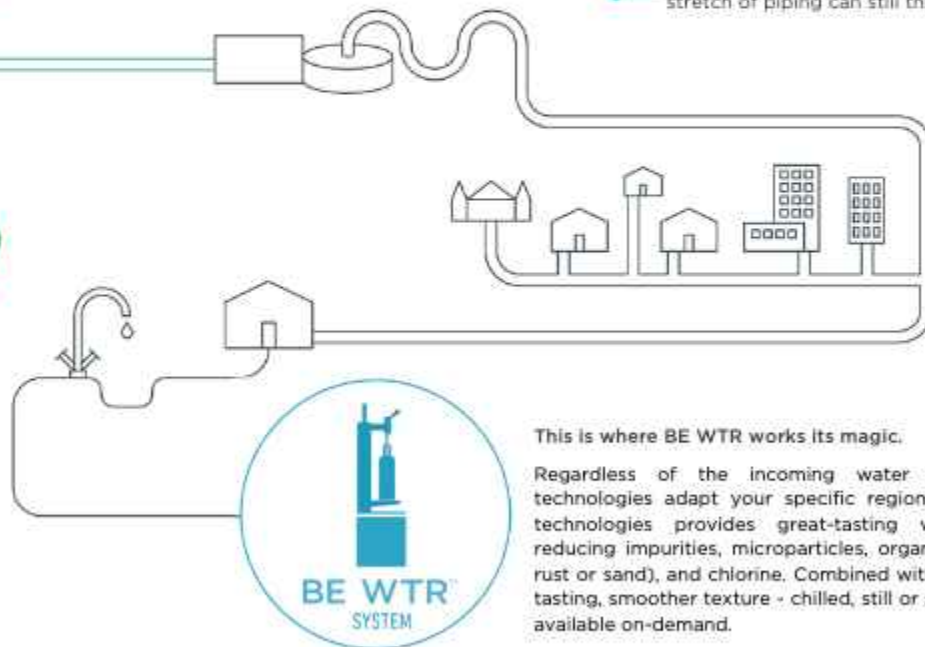

Our systems draw on ultra-fine filtration to sieve out chlorine and the finest of particles (like rust and micro-plastic), leaving nothing but good local minerals and great-tasting water behind.

- In most cities, your tap water's source is close to home, whether from a natural water source (such as mountains, lakes, or rivers) or local underground reservoirs.
- Drinking water treatment plants play a key role in collecting water from various sources, before purifying it and filtering out the nasties to make it safe to drink.

● But when it comes to that very last mile, your final stretch of piping can still throw up a few pitfalls.

WHERE DOES MY WATER COME FROM?

This is where BE WTR works its magic.

Regardless of the incoming water quality, our filtration technologies adapt your specific regional needs. Our filtration technologies provides great-tasting water by significantly reducing impurities, microparticles, organic substances (such as rust or sand), and chlorine. Combined with AQTIV™, enjoy better-tasting, smoother texture - chilled, still or sparkling water - always available on-demand.

BE WTR AQTIV™

Recreating nature's sources when water gushes out and meets fresh air, AQTIV systems deliver an exquisite sensorial hydration experience.

Simply turn on the tap to enjoy better tasting water. Still or sparkling water with a smoother texture and an enhanced mouthfeel, making your ordinary tap water taste fresher than ever before.

reddot winner 2023

NATURE INSPIRED TECHNOLOGY FOR A TOTALLY NEW WATER EXPERIENCE

Prepared by our high performant filter we ensure highest water quality and taste.
Now, the new AQTIV technology unleashes the power of your local tap water.

Through an innovative system combining a vortex mechanism, 18 micro-jets for an optimal water aeration, and an annular air protection around the nozzle extremity, the water flows in an accelerated movement, resulting in improved aeration and oxygenation. Just like in nature, when water - source or mineral - gushes out fresh from its natural source and encounters air.

In a unique and singular gesture, AQTIV brings a new wave of freshness, and with the lightness of the air, enhances your tap water.

 Swiss Design
Patent pending

AQTIV ONE

Discover the new taste of water with a timeless & minimalist design system to be placed as a hydration station.

- Upgraded water with activated charcoal and ultra filtration technology
- 2 service heights, with rotating glass holder
- Same lever for still & sparkling
- Fully integrated with drip tray connected to waste storage tank
- High-refrigeration technology with low-energy consumption
- Stainless steel tap

20, 30 or 80 litres per hour of cooling capacity

Still water

Sparkling water

Swiss Design

DESIGN ACCES SORIES

BTTL

Made in Italy, the new glass BTTL has an innovative design with a bigger neck for optimal filling and cleaning. Available with dedicated screw lids for still or sparkling water. 500 ml & 750 ml.

BTTL CAP

Available with dedicated recyclable aluminium caps for still or sparkling water, the BTTL CAP is perfect to replace your in room & conference room plastic bottles! 500 ml & 750 ml.

DESIGN ACCES SORIES

NOMAD BTTL

Hit the road with the BE WTR NOMAD BTTL, our answer to elegant on-the-go water solutions. This design-led accessory comes in BE WTR's signature vibrant orange or a crisp, immaculate white. 500 ml capacity.

FLEX BTTL

The FLEX BTTL - the first bottle that combines the lightness and robustness of stainless steel and the convenience of a capsule lid and a screw lid (with dedicated caps for still or sparkling water), along with a customizable strap (available in 4 colors) for easy carrying. Whether you're a beach club, hotel, or enjoying outdoor sports, the stainless steel BTTL is the perfect solution. Capacity: 75cl / compatible with BE WTR BiG.

BE WTR AQTiv SYSTEM

TAP

Swiss Design - Patent pending

- Chilled, still and sparkling water
- Swiss Patent pending Technology for a new taste of water
- New design and unique gesture for a new hydration experience

BE BOX

A compact built-in under-the-counter unit

- Cooling technology for a constant cooling temperature
- Carbonation system
- Low energy
- High hygiene

FILTER

Filtration technology*

- Filters particles, and chlorine
- Reduces microplastics
- Reduces bacteria
- Prevents bad taste and smell

BE CONNECT

An innovative filter head

- Monitor your filter for optimal water quality
- Save minimum 30% on energy with switch-off mode
- Stay ahead with preventive maintenance features
- Detect leaks and take control
- Track and reduce your CO2 footprint
- Follow up still and sparkling water consumption

BE PROUD

Switching to an innovative approach to hydration while incorporating planet-friendly technology and design - that's the BE WTR philosophy. Working out of Lausanne, our engineers collaborate with nutritionists, water experts, sommeliers, and designers to elevate water and treat you and the planet to the best.

"I believe it's on us to be the change we want to see in the world. Cutting back on single-use plastic is the smallest biggest change people can start making. And if you're getting 100% pure, great-tasting water back in return, then what's not to love?"

I'm a mountain guy at heart, and seeing the devastating effects of climate change first-hand really hit home. I'm proud to be part of a game-changing brand that's as much a way of life as it is a product.

Mike Hecker - Founder

Antoine Cahen - Industrial designer

"I'm inspired by the challenge of achieving more with less."

Iconic designer Antoine helped take Nespresso global, and has been integral to its success since 1988. His curiosity and creative streak make him passionate about simplifying the user experience while fostering new habits, with the emphasis on functional flow and technical beauty.

"I have a deep appreciation for BE WTR to lead the way for revitalized water in an environment-friendly manner. It is only through collective, responsible actions that we will improve health and the environment."

World record-beating entrepreneur, speaker and pilot: André is inspired by breaking boundaries and reaching new heights. André's taste for adventure and can-do spirit fuel his desire to achieve lasting spiritual and environmental change.

André Borschberg - Explorer and entrepreneur

When we chose BE WTR, we looked into so many details. The design of the bottle, it had to be a wide neck- for easy cleaning. The caps solution was important. And the filtration: we liked that it is premium quality and always followed regulations and standards.

Saeed Muhammad is the Health and Safety Manager at Nikki Beach, Dubai

We needed a water solution... BE WTR offers a solution to 9 of the 17 United Nations Sustainable Development Goals. No more plastic, waste or transport. That's all it took to convince us.

Director of Domaine Saint Clair, Le Donjon, Etretat France

With BE WTR, we filter Zermatt's local water and serve it in sustainable, reusable glass bottles - no plastic - which is important for our company and for the planet.

Andreas Alm, owner of the Brasserie Uno, Switzerland

I won't hide the fact that the only thing I regret is not having made the change more quickly, it's another world, using your BE WTR system, it's a pleasure, at every moment of the day, we drink and share with our customers.

Chef Frederik Kondratowicz, Hotel de Ville de Fribourg, Switzerland

By removing 1,500,000 plastic bottles from our operation annually we are protecting the environment, reinforcing our social values and practicing sustainable tourism, supporting both Dubai Can and the Dubai Sustainable Tourism (DST) initiative.

Tolga Lacin, Area General Manager, Marriott International
