'Farm Trans is strong throughout Europe. As we have offices and equipment in five countries, our own network from Ireland to Poland and work with permanent partners, we can serve the entire continent.'

Adriaan de Bruijne, CEO

Leading the way in transport & logistics

Farm Trans leads the way in safe food transport and smart logistics. Discover Farm Trans services and make transport more efficient, innovative and sustainable.

TRANSPORT

Bulk

Have Farm Trans agricultural transport experts transport your bulk goods safely and quickly throughout Europe, including the UK.

Temperature controlled transport

Have the transport experts at Farm Trans deliver your vulnerable frozen and fresh products throughout Europe and beyond, under ideal conditions.

LOGISTICS

Connected services

You want your logistics to be as fast and efficient as possible, but you can only achieve that by optimising your transport process. From start to finish, day in, day out. Connected services arranges everything for you.

Warehousing & Cross-docking

You want to keep the minimal amount of stock but still be able to deliver quickly. Farm Trans ensures you can do just that with cross-docking and smart warehousing.

Going next level

Farm Trans has been strong in food transport since 1987. And we stay strong through innovation and investment. In IT, in sustainability and in our people. For the next level in logistics.

PEOPLE

Our drive for people

Transport just doesn't happen without the right people, which is why we value our people so much. We invest in a strong and complete team: from data analysts to drivers. And we think it's important that they're safe, healthy and happy in their work. We take our people to the next level in their career via our own Farm Trans Academy.

PROGRESS

Our drive for progress

The logistics company of the future is an IT company. Drive, ship and fly digitally now and you'll win today and tomorrow. That's why data is the fuel we use to move forward today. Using smart data enables us to find fast and easy solutions

to logistical puzzles and ensure together that your supply chain is shorter, cheaper and more sustainable than ever.

PLANET

Our drive for the planet

Transport is ripe for transformation, but you don't achieve lower emissions just by using more efficient vehicles and local collaboration. It starts before the journey. That's why we schedule the most efficient routes, times and means of transport in advance and our Smart Warehouse calculates the fastest goods transfer. We're data-driven in our quest for sustainable logistics.

Read how we are preparing for the future with the sustainable transport of tomorrow on [farmtrans.com/sustainability](https://www.farmtrans.com/sustainability).

A

Transport from A to B, from A to Z

BULK TRANSPORT

Farm Trans already started with bulk transport in 1987. At that time we were just involved in potato transport but today we transport many more dry bulk goods such as onions, canned goods and animal feed raw materials throughout Europe, including the UK. Have Farm Trans agricultural transport experts transport your bulk goods.

Agricultural bulk goods

You can count on our bulk transport for bulk agricultural products, including: potatoes, beets, beans, topsoil/compost, peas, grain, wood/sawdust, celeriac, coffee, rapeseed, maize, seed potatoes, leeks, Brussels sprouts, kale and spinach.

› 'We combine our agricultural skills with the latest techniques to provide you and your goods with the very best service.'

TEMPERATURE CONTROLLED TRANSPORT

Temperature controlled transport to any desired destination in Europe and beyond. Farm Trans arranges fast, reliable and food-safe transport of frozen and fresh products. Have the transport experts at Farm Trans deliver your food and other products under ideal conditions from -30 to 30 °C.

Trouble-free transport overseas

Have Farm Trans take over all your freight transport from and to the United Kingdom. We have considerable expertise in transporting to the UK and have invested since Brexit to ensure worry-free transport from and to the UK. We arrange everything according to the rules with our smart IT infrastructure and our own office and fleet in the UK, so you can enjoy trouble-free transport overseas.

› 'We take care of everything from start to finish. Each and every consignment is in good hands.'

B

Smart solutions for your entire logistics process

CONNECTED SERVICES

You want your logistics to be as fast and efficient as possible, but you can only achieve that by optimising your transport process. From start to finish, day in, day out. Connected services arranges everything for you. As your Control Tower, we ensure the right transport with the right services to streamline your logistics process. And you gain insight into how we make the most of every route.

'With Connected services, we take logistics to a higher level.'

Get the most out of transport

Your transport process involves a lot more than you think. Less kilometres, more freight and more efficiency. With Connected services we optimise your transport process and we do this with people and technology. We take the helm in carrier management, account management and operational management and harness the power of IT and data with our Logistics Management System (LMS). Our data analysts use all data to continue to optimise your logistics process so we can together make transport better, more efficient and more sustainable.

BETTER CONNECTED WITH FARM TRANS

More efficient and more sustainable transport throughout Europe and the UK

Use the power of IT with the power of people

All your logistics data integrated in one system

One permanent Account Manager for your entire process

Continuous insight via real time dashboards and reports

Smart and fast delivery

WAREHOUSING & CROSS-DOCKING

You want to keep the minimal amount of stock but still be able to deliver quickly. Farm Trans ensures you can do just that with smart warehousing and cross-docking for ambient, fresh and frozen products.

Warehousing

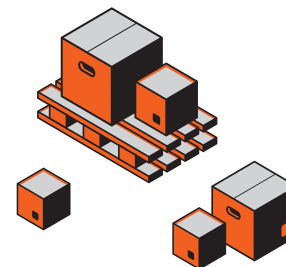

Need short-term storage? The Farm Trans Smart Warehousing stores your goods securely under the exact conditions your consignment needs. With our partners, we have strategic storage sites across Europe including cold storage and freezer facilities and the certificates to keep your food safe.

Cross-docking

Farm Trans takes your goods from A to B, via C in the most efficient way. With groupage, we combine different loads into one large load, combining the right freight and transporting everything in the fastest and most sustainable way. We have partners in Germany and our own cross-docking location in the Benelux, where we ensure the smooth transshipment of goods, including temperature controlled transport. Our smart IT solutions enable us to map out goods flows and identify the most efficient means of transport and routes.

Fast, for fresh and frozen

- Own cross-dock facility in Lommel, Belgium
- Partner locations with our service in Germany
- High capacity with space for 800 pallets
- Freezer cells (-20 °C) and cold stores (0-4 °C)
- Own team, from front loaders to shunters
- Optimal groupage for more efficient journeys
