

The way milk is supposed to be

We are the Milk Artisans, committed to Purity.
 We are dedicated artisans, crafting our dairy products with only the purest milk. Our philosophy is simple: nothing goes in, and nothing is taken out of our dairy products.
 We invite you to discover the myriad benefits of our non-homogenized, whole, low-temperature pasteurized, and rich natural full natural cream milk.

Rich, clean, full-flavoured and pure.

Whole. As it came from farms very carefully selected by us. This is one of our secrets: we do not interfere with the milk.

Pasteurized at mild temperature

In order to keep intact the natural properties of milk, we opted for pasteurization at mild temperatures, using the latest technologies in the industry. We use cutting-edge technology to ensure minimal intervention, maintaining the milk's optimal qualities, including its vitamins, proteins, and fatty acids

Non-homogenized

We take pride in not homogenizing our milk, allowing fat globules to remain intact. This decision prevents them from breaking into small particles, preserving the natural structure of the milk. As a result, non-homogenized milk offers a taste that evolves with the seasons, ensuring that Artesana's dairy products are always a unique and tasty experience.

With true and rich cream

True cream is only found in non-homogenized milk, where undisturbed fat rises to the surface, forming a luscious layer of sweet cream. At Artesana, we are proud to offer you this genuine experience.

*Taste the cream
It is the sweet, natural cream that separates naturally in milk*

Made from glass

We use glass packaging, which is 100% recyclable and which better protects our milk.

Artesana is part of us, it is not just a business. We want you to get to know us and our story. Who we are, where we came from and where we are going. It was not easy for us to get this far, but we supported each other and enjoyed every step we took before. No detours and no compromises. That's who we are and that's what we put on your table.

Artesana is a winner of the:

The way natural apple juice is supposed to be

"Cules și stors" - Picked and Squeezed - is our fresh, cold-pressed apple juice.

Pasteurized at a mild-temperature, just like our dairy products, the minimal intervention on nature's magic preserves the taste and valuable nutritional indicators: vitamins, mineral elements and organic acids.

It does not contain added water, concentrated fruit juice, sugar, sweeteners, colors or acidifiers.

We do recommend shaking the bottle before consumption for homogenization, as you guessed it already, our juice is non-homogenized.
