Fast, strong and simple to use...

CRL Kwixset® Expanding Cement

Kwixset is a fast-setting, waterproof hydraulic expansion cement. It mixes with water, initially sets within 15 minutes, and within one hour sets stronger than concrete. Great for patching concrete and brick, and anchoring bolts, screws, balustrades, gates, fencing, railings and more.

Kwixset is not affected by standing water making it ideal for exterior use. It will not shrink, crack or dry out making it ideal to set railings, brackets and other fixtures.

CRL Kwixset Expanding Cement is a grey hydraulic type cement that expands as it sets, and is specially formulated to produce exceptional strength and bonding qualities. Kwixset pours into place smoothly when mixed with water. Sets within 15 to 20 minutes, and when fully cured develops compression strengths in excess of 8000 pounds per square inch.

- Suitable for exterior and interior applications
- Great for setting core mount stanchions for vertical posts
- Fast setting, will not shrink or crack when used as directed
- CRL recommends consulting with the glass fabricator prior to wet setting laminated tempered glass
- Easy to install

CRL Aluminium Shelf Extrusions are designed to support glass shelves without a lot of visible metal. The cleat easily attaches to studs with screws, and can support a shelf with a maximum projection of 305 mm. Offered in 2.4 m long Extrusions, you are no longer limited to "standard size" shelves. The Extrusions may be easily cut to size, and by installing matching End Caps the shelves make for a beautiful presentation.

Desktop Design System
- A new and innovative range of desktop and countertop designs from CRL
- Using a modular system the installer can create glass screens of varying heights for either fixed or freestanding solutions
- A base profile with corner connectors provides one useful solution or the same profile can be used as post supports to be fixed back to the surface or to free standing feet

---
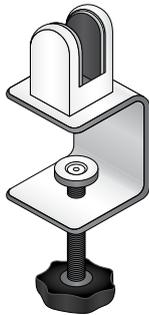

MDSCLAMP

Moveable Desktop Screen Clamp
- This new innovative clamp from CRL allows screens to be temporarily installed either parallel or perpendicular to the surface edge without damaging the desk or work surface
- This solution provides space saving benefits allowing the glass screen to be fixed close to the edge of the surface
- **CRL square or D shaped glass clamps to be ordered separately to be fixed to the moveable desktop screen clamp. Call Technical Sales for further assistance**

TOYO® has developed a cutting system called 'Tap Wheel™'. This is TOYO®'s patented product and provides the following features...

1. The wheel itself vibrates when rolling due to the special design inside the wheel, which provides a non-slip and stable score line and even deeper cut into the glass to enable an easy and clean square break-out.

2. There is no rolling defect of the wheel with glass chippings, which can be seen with conventional wheels, assuring a smooth and consistent cutting quality with further improvement in durability.

Diamond drills are designed for use with a central coolant feed, preferably by means of water feed chuck. For best results the following points should be observed:

• Run the tool as near as possible to the recommended speed below. These speeds are not intended to be rigidly adhered to, as in certain circumstances a variation will improve results, but they will prove satisfactory in most cases.

Diameter in millimeters

Up to 6 mm diameter = 4,000 rpm
7 mm to 25 mm diameter = 2,000 rpm
26 mm to 38 mm diameter = 1,500 rpm
39 mm to 50 mm diameter = 1,000 rpm
Over 50 mm diameter = 500 rpm

• Water Feed: The drill chuck should be connected directly to the water main if possible and not a header tank. This is to ensure enough water pressure to eject the cores. 3 mm to 5 mm drills need maximum water pressure i.e. above 30lb per square inch for efficient core ejection.

• Where possible always drill over a hole in the machine table to ensure the core does not jam in the drill.

• Never try to drill with a core stuck inside the drill.

• Allow the drill to do the cutting and do not try to force it through the work.

• Before drilling, ease off the return spring tension on the drilling machine to enable the operator to 'feel' the drill cutting.

• If the drill loses its cutting speed, this can be restored by drilling into a suitable piece of silicone carbide grinding disk of approximately 120/J grit.

• Where a hole is required with no shelling on the back surface, it is the usual practice to drill from both sides.

TAPER-LOC®

Install glass with ease

Conforming to Building Standards Across Europe

At CRL, we are committed to the testing and development of all of our products.

All CRL TAPER-LOC® Systems are independently tested to meet British, German and US Standards. We have solutions up to and including 3kN load tests.

![TAPER-LOC X DRY GLAZE RAILING SYSTEM]

SIMPLE.
FAST.
SAFE.

THE ULTIMATE ARCHITECTURAL BALUSTRADE SYSTEM FOR THE PROFESSIONAL INSTALLER

Frameless Glass Balustrade System

- Dry-glazed installation – TAPER-LOC® facilitates the fastest possible way to install glass balustrades and is clean for the installer and the finished product

- Saves Time & Money while maximising safe working conditions – The horizontal TAPER-LOC® design allows the system to be adjusted, dismantled and re-set completely from the 'safe side' of the balustrade (including both 'fast-seal gaskets'), avoiding scaffolding cost and time (particularly useful in retrospective fit and when changing a glass panel)

- Designed and tested for use with 17.52, 21.52 and 25.52 mm toughened laminated glass and 12, 15 and 19 mm toughened monolithic glass

- Surface (D) and fascia (F) drilled base shoe available

- Enables the strongest and safest barriers, giving the installer and the final user peace of mind

NEW

Taper-Loc base shoe allows balustrades to be installed flush with the slab edge

Step 1

Ready...

TAPER-LOC® Tapers insert into the Base Shoe

Step 2

Set...
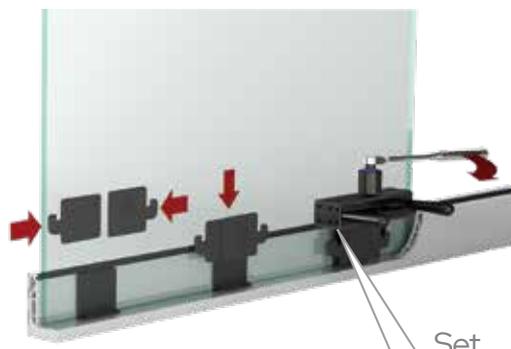

The TAPER-LOC® Installation Tool (TLK12) compresses the Tapers together with a predetermined torque setting. The glass is locked in to place every single time.

Step 3

Done.
