

Take your environmental responsibilities seriously with Everflow

Reduce consumption. Act responsibly.
Lower your carbon impact.

As a responsible business, you're always looking for opportunities to do more to improve your environmental credentials. But it's not always easy to know which aspect of your organisation to focus on next.

Here's how we can help across utilities services like water and waste:

EcoMOTs

Let us dive deep into your water consumption and usage patterns, so we can help you identify water efficiency opportunities such as the installation of water saving devices and leak sensors.

Not only can an EcoMOT help you save up to 30% off your water bills, it can also help you reduce wasted water and lower your carbon footprint as a result. In 2025 we helped customers save 4 million litres of water through EcoMOTs.

Smart water loggers

We offer customers smart water loggers to help you monitor and manage your water more accurately. By being able to take readings and integrate the data with your reporting tools, you can ensure billing accuracy, control costs and keep track of usage at all times.

Carbon offsetting waste collection

As part of our waste management service we commit to offsetting emissions associated with the collection and disposal of your waste.

Did you know **44%** of water supply points in the UK are in areas of serious water stress? Reducing leaks and overconsumption is critical for the local environment and community in these areas.

132t

We saved customers 132 tonnes of carbon emissions in one year

We understand that as part of your supply chain, it's important for us to work hard to reduce our own emissions...

which means your Scope 3 emissions are also lower. Each year we produce a comprehensive Emissions Footprint Report and a wider ESG report to our carbon reduction efforts and environmental progress.

How we're doing:

47,800 tonnes of emissions offset

Since 2021 we've been investing in responsible carbon offsetting.

3 years ahead of our CO₂e targets

We have made significant progress in reducing our Scope 1, 2 and 3 emissions.

90% of waste at our head office is now recycled

Through staff training and adequate bin provision we're reducing our contributions to landfill.

85% of employees completed sustainability training

A more informed workforce helps to ensure we become a more environmentally responsible company.

We were the first water company to sign the Climate Pledge and commit to meeting Net Zero by 2040.
