

DANA[®]

ALUMINIUM FOIL CONTAINERS

SO VERSATILE, **DANA** ALUMINIUM FOIL CONTAINERS CAN BE USED IN:

Freezer & Refrigerator

Microwave Oven

Conventional Oven

ALUMINIUM FOIL CONTAINERS

DANA® aluminium foil containers are available in all shapes and sizes to meet different food packing requirements. They are useful for food preparations, cooking, freezing, storage and heating. They are light in weight, easy to handle, store and transport. They can be sterilized and are suitable for use both in conventional and microwave cookers. As aluminium is impervious to moisture, gas, grease and sunlight, optimum freshness, flavour and aroma of contents is ensured, with no 'tainting' from the packaging. In other instances, where a barrier is required, perhaps because of the acidic nature of food, an internal protective coating can be applied. Most importantly, aluminium foil is endlessly recyclable, thereby drastically reducing energy needs in its manufacture and also conserving natural resources.

HOW TO USE ALUMINIUM FOIL CONTAINERS IN THE MICROWAVE

- Only use aluminium foil containers that are 3 cm deep (the microwave will not penetrate further down).
- The containers must be filled to a maximum of 2.5 cm or else there is a risk of burning.
- Always remove aluminium foil cover or foil lined lid, otherwise the dish will not be heated. **DANA®** cling film may be used to cover the container instead.
- The aluminium foil container must be placed at least 2 cm from the walls of the oven, or from another aluminium container, or any other metal object in the microwave.
- Increase recommended cooking and heating times by 10% as microwaves are only absorbed from above.
- Don't use bent or damaged aluminium foil containers and don't reuse the containers in the microwave.

NUMBERING SYSTEM

The type of container, its volume and rim style is denoted by its identification number. The first digit denotes the type and shape of container:

- 1 - Square and Rectangle
- 5 - Round
- 6 - Tray
- 7 - Platter

The next three digits indicate the volume of the container. For example, a rectangular shaped container with a volume of 250 cc will have a code 1025, a tray with a volume of 1800 cc will have a code of 6180, etc.

The last item of the code, which is a letter, denotes the type of rim style:

- L - Use with flat lids
- G - Flat lids cannot be used

In some cases a second letter may be added to the code:

- S - Smooth walled container
- Q - Lacquered container
- E - Embossed
- C - Container with compartments
