

unidrain®

In 2003, the architect Claus Dyre developed a linear floor drain to be placed against the wall, and this was the start of Unidrain. In the course of just a few years, Unidrain has developed into one of the world's leading floor drain producers and has expanded the product portfolio, still focusing on both function and design. Unidrain has received several international design awards and today is represented in more than 30 countries.

LINE

HIGHLINE COLOUR IS A DEVELOPMENT OF THE NORMAL HIGHLINE RANGE, TO WHICH WE HAVE ADDED NEW FINISHES AND COLOURS, WITH THE FRAME AND PANEL TREATED TO MAKE IT EASIER TO MATCH METAL FITTINGS IN THE BATHROOM. HIGHLINE COLOUR IS NOW AVAILABLE IN BRUSHED STEEL (HAND-POLISHED STAINLESS STEEL), WHICH PROVIDES A GLOSSY SURFACE LIKE CHROMIUM PLATING, AND BRASS, COPPER AND BLACK, ALL IN PVD-TREATED BRUSHED STAINLESS STEEL.

CONSTRUCTION

UNIDRAIN'S FLOOR DRAINS ARE PLACED AGAINST THE BACK WALL. THE VERTICAL WALL FLANGES ARE ATTACHED TO THE WALL AND, TOGETHER WITH A MEMBRANE, ENSURE A FULLY WATERPROOF INSTALLATION. SIMILARLY, THE HORIZONTAL FLOOR FLANGES ENSURE A WATERPROOF OVERLAP IN THE FLOOR.

CONCRETE

Concrete cast on a stable insulation layer with levelling in concrete (or other suitable levelling medium). Liquid membrane with sealing/ reinforcement band. Tiling.

DOVETAIL PLATES

Concrete cast on dovetail plates with levelling in concrete (or other suitable levelling medium). Liquid membrane with sealing/ reinforcement band. Tiling.

FOR ALL STRUCTURES

Unidrain is tested and approved for use in all types of floor structure in tiled wetrooms - whether these are heavy concrete structures or light wooden floor joist structures. The Unidrain mounting set (see p. 19) is recommended for use in wooden floor joist structures and other light floor structures.

For all structures, the materials and building methods used must be appropriate and approved for wetrooms.

Download full installation guides from www.unidrain.com

NEW INSTALLATION GUIDES

Concrete floor construction

Concrete on steel sheet construction

Plywood on wooden floor joist

SAFE RESULT

1. SIMPLE AND PRECISE INSTALLATION AND FIXING
Easy and simple assembly with precise fastening ensures correct position throughout the installation process.

2. FIXING DURING CASTING
The drain unit is attached to the wall with screws throughout the casting process and is therefore not displaced. After casting, the unit must be fully supported by the concrete layer.

3. EASY TO PERFORM LEVELLING WITH ONE-SIDED SLOPE
A one-sided slope makes it easy to ensure correct levelling without the risk of backflows and depressions. The base for the tiled surface can be laid on a completely even and level surface.

4. WETROOM PROTECTION OF WALLS AND FLOOR
The membrane's overlap with the drain unit's floor and wall flanges forms a sealed, wetroom-protected connection to both floor and wall.

5. IT IS EASY TO LAY TILES ON A COMPLETELY LEVEL SURFACE
The one-sided slope makes tile-laying even easier - even with very large tiles. There is no need to cut the tiles to fit around the drain. tilskæring af fliserne omkring afløbet.

PROTECTIVE FILM ON ALL LINE DRAINS FROM 1 JUNE 2021

This is the end of concrete debris, mortar and tile shards in the drain. We have developed a new film that protects every aspect of the installation process. After the plumber has inserted the water trap and attached the drain to the wall, he seals it with the film. Then the drain is ready for the builder to take over and cast the floor. Prior to applying the wet room membrane, the builder removes the part of the film where the wet room membrane will be applied. Finally, just before laying the tiles, the last part of the film is removed.

THE FIRST FIVE INSTALLATION STEPS ARE ILLUSTRATED ON THE FILM

1. Position the outlet unit
2. Check that the gasket is placed correctly
3. Mount the water trap
4. Remove back of the film
5. Seal the film over the drain

Introduction

Sides without wall flanges must comply with the rules for the minimum distance to the wall. For line units placed against the rear wall see p. 14-17)

Free-standing

DRAIN UNIT | 3004

For shower cubicles without fixed walls.
The drain unit has four floor flanges.
Including four height-adjustable feet (40-190 mm).
See frames on pp. 31 + 35

Unidrain with ClassicLine frame/grating and mounting set, 22 mm | wall

- LOWER INSTALLATION HEIGHT
- LOCKING TO DRAIN UNIT

OUTLET UNIT Ø 50 | 1417.0050

OUTLET UNIT Ø 50 | 1418.0050

Ø 50 mm, with removable odour barrier that can easily be cleaned. VA-approved. Can be turned 180°.

- Should not be used in multi-storey buildings
- The odour barrier can react to over-/under-pressure in the drain system
- Correct venting of the drain system is important, so that the odour barrier works correctly
- The odour barrier opens/closes with the help of a spring
- A rubber seal ensures that the odour barrier is closed when not in use
- There is no water in the odour barrier

Horizontal outlet incl. removable water trap that can be dismantled for cleaning, can be rotated 180 degrees if a rear facing outlet is required. The water trap has a 50 mm water seal. Note: Extra low installation height and VA-approved.

OUTLET UNIT Ø 75 |
1412.0075

Ø 75-mm vertical drain
Including removable water trap that can be dismantled for cleaning.

OUTLET UNIT Ø 75 | 1414.0075

The water trap is removable and can be taken apart for cleaning

Note: The outlet unit can be used in 3 different ways:
If the water trap is positioned at the top and the top two side spigots are used as inlets from an external unit, then a separate water trap must be installed on the added unit.
If the water trap is pushed down into the outlet unit, the external unit connected to the top side spigots will be covered by the included water trap, so there is no need for an external water trap.
If the bottom two side inlets are used, you must establish an external water trap, regardless of the position of the Unidrain water trap.

The water trap is removable and can be taken apart for cleaning

Note: The outlet unit can be used in 2 different ways:

If the water trap is positioned at the top and the two side spigots are used for an external unit, then a separate water trap must be installed on the added unit.

If the water trap is pushed down into the outlet unit, the unit connected to the side spigots will be covered by the included water trap, so there is no need for an external water trap.

The water trap is removable and can be taken apart for cleaning

Note: The outlet unit can be used in 3 different ways:

If the water trap is positioned at the top and the top two side spigots are used as inlets from an external unit, then a separate water trap must be installed on the added unit.

If the water trap is pushed down into the outlet unit, the external unit connected to the top side spigots will be covered by the included water trap, so there is no need for an external water trap.

If the bottom two side inlets are used, you must establish an external water trap, regardless of the position of the Unidrain water trap.

Ø 75 mm

**WATER TRAP |
1820.0050**

Water trap 50 mm water seal. Meets capacity and self-cleaning requirements according to EN 1253 (the pan-European standard for floor drains) and is VA-approved.

The water trap can be removed from the outlet unit and then dismantled for cleaning.

NOTE: Suitable only for outlet unit 1418.0050

**WATER TRAP |
1820.0040**

Meets capacity and self-cleaning requirements according to EN 1253 (the pan-European standard for floor drains) and is VA-approved. The water trap can easily be removed from the outlet unit using the mounted hook. Then dismantle and clean the water trap.

**WATER TRAP |
1820.0010**

Meets capacity and self-cleaning requirements according to EN 1253 (the pan-European standard for floor drains) and is VA-approved. The water trap can be removed from the outlet unit and then dismantled for cleaning.

**WATER TRAP |
1820.0060**

Meets capacity and self-cleaning requirements according to EN 1253 (the pan-European standard for floor drains) and is VA-approved. The water trap can be removed from the outlet unit for cleaning.

ODOUR BARRIER |
1820.0030

Has an automatic odour barrier instead of a water trap, so that it cannot dry out. Can be removed for cleaning. VA-approved.

•Should not be used in multi-storey buildings

- Can react to the over- and under-pressure in the drainage system
- Correct venting of the drain system is therefore important, so that the odour barrier functions correctly
- Opens and closes with the help of a spring
- A rubber seal ensures that the odour barrier is closed when not in used

STRAINER |
1810.0000

Simple and easy day-to-day maintenance of floor drain.

The strainer is placed on top of the built-in water trap / odor barrier. Prevents the water trap from becoming clogged.

SEALING COVER |
1890.0000

For testing of the wetroom solution for leaks before laying tiles. Placed in the drain unit. Fill the shower niche with 20-mm water and allow to stand for 24 hours to test the seal.

HOOK |
1840.0000

Hook to lift the water trap up from the outlet unit. Suitable for use with line and corner models.

CLASSICLINE FRAME | BRUSHED STEEL | 1500

Available in 8, 10 and 12 mm heights (depending on the thickness of the floor tile). The rubber insert ensures a snug fit inside the unit. A countersunk bearing ensures that the grating fits perfectly into the frame. The frame is non-optional and has two functions: To support the grating and give a perfectly flush finish with the tiled floor.

NB! Frame height (H) = tile thickness + approximately 2 mm for tile mortar and membrane.

Heightener set: Plastic (PE)

HIGHLINE COLOUR FRAME | COPPER | 1920

The set consists of a panel, rail, heightener set and screws. The set must be assembled before installation.
Includes 2 x hooks to be used for lifting the panel.
The panel solution is placed directly inside the drain unit.
The rail is specially designed to provide a snug fit. Installed with HighLine frame.
The heightener set to adjust the panel is included, so that the panel can be matched to the frame height.

HIGHLINE CUSTOM | 1950

The set consists of the Custom base, rail, heightener set and screws.
The set must be assembled before installation.
Glue your own floor tile to the base, to complete the solution.
The Custom solution is placed directly inside the drain unit.
The rail is specially designed to provide a snug fit.

Special glue for adhesion of your own tile and 10 x 6-mm spacers to use for installation are also included.

Heightener set:
H: 1, 2, 3 og 5 mm
Adjust the height of the Custom base if the tile thickness on the base does not correspond to the tiles on the rest of the floor. Fit between base and rail.

Cross-section of drain unit without frame / with Custom (with own material fitted).
To use without frame: Gap between Custom and floor tile = 6 mm

INSTALLATION INSTRUCTIONS FOR HIGHLINE CUSTOM EXAMPLE WITH 10-MM TILE

Package contents:

The Custom solution consists of a stainless steel frame and a Custom base, which is assembled with the screws supplied. A heightener set (1, 2, 3 og 5 mm) is included to adjust the height of the base. In addition, 10 pcs. 6 mm spacer elements for placing the Custom base and a special glue for gluing the tile to the Custom base

1. FLOOR TILE

The floor tile is cut to achieve a space between the Custom base and the floor and the wall tile of at least 6 mm. Use spacer element supplied for this.

2. & 3. OWN TILE

Your own tile is glued to the Custom base with the required overhang at both ends. The overhang can be from 0 mm right up to 40 mm in length, depending on the thickness, material and quality of the tile.

4. LONGITUDINAL OVERHANG

The tile glued on the Custom base can be designed/cut so that it is wider than the actual base. This achieves the recommended 6-mm gap between the wall and the floor tiles, and the Custom panel (in the example shown, the overhang is 6 mm).

BESPOKE DRAINS

BESPOKE ARE SPECIAL DRAIN UNITS PRODUCED TO ORDER

MODULAR DRAIN TRAYS MAKE IT POSSIBLE TO PRODUCE UNIDRAIN FLOOR DRAINS IN ANY LENGTH AND ALONG SEVERAL WALLS. MODULAR DRAIN TRAYS CAN BE SEVERAL METRES LONG, AND ARE THEREFORE IDEAL FOR INSTITUTIONS, CHANGING ROOMS AND LARGE BATHROOMS.

THE OUTLET UNIT, FRAMES AND GRATING COME FROM OUR STANDARD RANGE. THIS MEANS THAT FRAMES AND GRATING ARE LAID END-TO-END, MAKING MAINTENANCE EASY AND CONVENIENT.

(Technical approval)

FLEX FRAMES

Flex frames are used to extend the floor drain's visible length. They are laid end-to-end to the frame, using tile mortar, so there is no need to cut small pieces of tile.

BESPOKE CONFIGURATOR

YOU CAN CALCULATE YOUR BESPOKE DRAIN YOURSELF

Enter your bathroom's dimensions and select your preferred modules, then select a ClassicLine or HighLine solution, and an outlet unit.

The calculation creates a drawing which shows the specifications of the required drain.

Send the calculation to us and we will prepare a quote for you.

www.unidrain.com/bespoke

EXAMPLES OF SOLUTIONS

TWO MODULES WITHOUT FLEX FRAMES

One bespoke drain unit that covers the double length of a standard model and without using flex frames to extend it.

ONE MODULE WITH FLEX FRAMES

Retain the vertical end flanges, even for odd measurements. Excess space is filled with flex frames in the sides.

TWO MODULES WITH FLEX FRAMES

When the bespoke drain unit has odd measurements, the excess space is filled using symmetrically-placed flex frames.

UNIDRAIN VINYL

- EFFECTIVE AND SAFE INSTALLATION
- EASY AND QUICK TO INSTALL
- MAGNETS KEEP THE GRATING IN PLACE WITHOUT ANY VISIBLE SCREWS AND FITTINGS
- WELL-KNOWN UNIDRAIN COMPONENTS AND INSTALLATION TECHNIQUES
- ALL IN ONE PACKAGE

*Note

dimensions!

VINYL SET | 4004

The vinyl set comprises a magnetic unit, frame and grating. For shower cubicles without fixed walls.

HEIGHT-ADJUSTABLE
FEET | 4814.0000

Four height-adjustable feet (120-220 mm) for installation on concrete.

MOUNTING SET
VINYL | 4804.1022

Consists of 4 wooden profiles that are screwed into the wooden joists. The drain unit is inserted into the profile and "clicks" into place. Ensures correct positioning and fixing of the drain unit in wooden floor joist structures. Adjusted to the correct length by cutting the wooden profile.

STRAINER | 2811.0010

Simple and easy day-to-day maintenance of floor drain.
Prevents the water trap from becoming clogged.

WATER TRAP | 2821.0020

Meets capacity and self-cleaning requirements according to EN 1253 (the pan-European standard for floor drains) and is VA-approved.
The water trap can easily be removed from the outlet unit using the mounted hook. Then dismantle and clean the water trap.

*57076920xxxxx

ODOUR BARRIER | 2821.0030

Has an automatic odour barrier instead of a water trap, so that it cannot dry out. The odour barrier can be removed for cleaning. VA-approved.

- **Should not be used in multi-storey buildings**
- The odour barrier may react to over-pressure and under-pressure in the drain system
- Correct ventilation of the drain system is important
- The odour barrier opens and closes with the help of a spring
- A rubber seal ensures that the odour barrier is closed when not in use

RISER | 2830.0095

Fit between the drain unit and the outlet unit. Can be used to correct the position of an outlet unit that is too low. 1 x Ø 40-mm side inlet (opened as needed). Not suitable for use with odor barrier 2821.0030.

- **If you install water trap 2821.0020 do not turn the side inlet more than 10 degrees away from the center position. Otherwise you will not be able to lift up the water trap for cleaning.**

CLASSICLINE FRAME | 2501

Available in 8/10/12 mm heights (depending on the thickness of the floor tile). The rubber insert ensures a snug fit inside the unit. A countersunk bearing ensures that the grating fits perfectly into the frame. The frame is non-optional and has two functions: To support the grating and give a perfectly flush finish with the tiled floor. **NB! Frame height (H) = tile thickness + approximately 2 mm for tile mortar and membrane.**

CLASSICLINE GRATING

The grating is placed on a countersunk bearing in the frame, to hold it securely. Only for use with ClassicLine frame.

S Q U A R E

UNIDRAIN HAS ADDED A SQUARE DRAIN AS A SUPPLEMENT TO THE ORIGINAL LINE DRAIN. THE INTRODUCTION OF THE SQUARE DRAIN MAKES IT POSSIBLE TO ACHIEVE A UNIFORM UNIDRAIN EXPRESSION IN EVERY ROOM WHERE THERE IS A NEED FOR A DRAIN.

EN 1253

EN 1253
(Pan-European standard
for floor drains)

VA.2.42/19872
(Technical approval)

G R E A T F L E X I B I L I T Y

- Low installation height (from 109 mm)
- It is possible to adjust the height and tilt the unit
- Customise side inlets Ø50 / Ø40 / Ø32, adapters included

EASY INSTALLATION

- Grating design matches the ClassicLine design
- Option of a customised tile solution (10x10 cm)

CLASSICLINE GRATING AND FRAME

The frame can be truncated when installing. By doing so, you can easily ensure that the grating is level with the tiles.

HIGHLINE CUSTOM

The Custom base is level with the horizontal flange. This makes it easy to ensure that the tile on the Custom base fits with the floor tiles.

- SAFE SOLUTION - PATENTED FLANGES ENSURE SAFE AND WATERPROOF SHOWER CABINET

SHOWERLINE - DRAIN UNIT WITH BUILT-IN SLOPE

THE SHOWERLINE DRAIN UNIT IS A FURTHER DEVELOPMENT OF THE ORIGINAL UNIDRAIN® LINE DRAIN. IN THE SHAPE OF A “U”, THE DRAIN UNIT DEFINES THE AREA OF THE SHOWER CUBICLE. THE DRAIN UNIT HAS A PREDEFINED, BUILT-IN SLOPE, WHICH MAKES CASTING AND TILE LAYING EASIER. THE EXTENDED WALL FLANGES MAKE THE WETROOM EVEN MORE SECURE AND SAFER TO REPLACE THE JOINTS IN THE WETROOM AREA.

CUSTOMISEABLE - ADD ALMOST ANY TYPE AND SIZE OF GLASS

ShowerLine gives you the opportunity to completely customise the glass wall. You can make the wall extend all the way to the ceiling and choose the depth of the glass from 800 to 900 mm. Consult your local glazier for advice regarding possibilities and the most secure solution.

The shower wall is placed on top of the enclosed floor profile, which also covers the exposed side of the tiles and the slope in the cubicle.

EASY - SAVES TIME ON BUILDING-IN THE SLOPE

ShowerLine is attached to the wall, and cast into the floor. The drain unit has an integrated 2% slope and makes the casting process easy, preventing the risk of backflows or depressions. When the drain unit is mounted safely, the two extended wall flanges guarantee a correct slope - made quick and easy.

SAFE SOLUTION - STRENGTHENS WETROOM SEAL

Unidrain's patented flange system makes the ShowerLine drain unit one of the safest solutions in the market. Flanges in both wall and floor ensure a 100% waterproof solution, and the tiles elegantly conceal the strong underlying installation. When the soft joints in the cubicle need to be replaced, the flanges make sure that this can be done without having to worry about damaging the wetroom seal below.

To finalise the solution, choose frame and grating or panel from our standard ClassicLine or HighLine series.

SHOWERLINE DRAIN UNIT, RIGHT-ALIGNED | 5022

ShowerLine has a built-in slope, so that the floor in the shower cubicle slopes correctly by 2% down towards the floor drain.

For added wetroom safety, the shower cubicle is framed by flanges on three sides.

Combine with: outlet unit, frame, grating/panel and shower screen.

GLASSLINE

- PATENTED SYSTEM: A COMPLETE SOLUTION FOR YOUR BATHROOM.
- THE DRAIN IS AN INTEGRATED ELEMENT.
- WETROOM-PROOF COVERING OF THE ENTIRE SHOWER CUBICLE.
- RAPID AND EASY INSTALLATION.
- SPECIFIES THE SLOPE IN THE SHOWER CUBICLE.
- NO VISIBLE FITTINGS OR SCREWS.
- EASY TO INSTAL WITH UNDERFLOOR HEATING.
- THE GLASS SURFACE IS TREATED WITH GEWE-CLEAN®, TO KEEP THE GLASS CLEAN AND SPARKLING

SHOWERLINE AND GLASSLINE

SHOWERLINE

ShowerLine is an enhancement of the original drain unit.

Here, two rails are welded to the ends: one to mount on the side wall and the other to mount the shower screen.

GOOD TO KNOW

- The ShowerLine wall flange is flexible and can be adapted to the corner's angle, if it is not exactly 90 degrees.
- Can be combined with both ClassicLine and HighLine.
- The drain unit is part of the fixed module.
- Can be combined with outlet unit, frame, grating/panel and shower screen from the permanent range.

INSTALLATION PRINCIPLE

Unidrain's patented flange system is also used for installation of the shower screen, which makes GlassLine the so far strongest and most wetroom-proof installation for shower cubicles.

The ShowerLine unit is secured to the wall and embedded in the floor. When the floor is cast, a 2% slope is integrated, to facilitate the casting process, preventing the risk of backflows or depressions.

The accompanying wall profile is screwed to the back wall, and the shower screen is attached to the profile and fitted into the ShowerLine track. Flanges in both wall and floor ensure a 100% waterproof solution, and the tiles elegantly conceal the strong underlying installation. The screen is thus solidly secured to both wall and floor, and cannot work loose over time.

GOOD TO KNOW

- The shower screen can be installed either before or after tiles are mounted for an existing ShowerLine solution, and can be replaced if it is damaged.

SHOWERLINE: INCLUDED IN THE PACKAGE

SHOWERLINE UNIT

The actual unit has patented floor and wall flanges that ensure a waterproof solution.

SMOOTHING PROFILE

The smoothing profile makes it easy and quick to make the slope and pull off the excess concrete.

TWO-PIECE WALL PROFILE

The accompanying wall profile is screwed to the back wall, and the shower screen is attached to the wall profile and fitted into the ShowerLine track.

2 X TEMPLATES

The pack includes 2 wooden templates to facilitate tile mounting. One template is for the glass screen in the floor, and the other for the wall.

SHOWERLINE UNIT, RIGHT-ALIGNED SHOWER SCREEN | 5002

ShowerLine has a built-in slope, so that the floor in the shower cubicle slopes correctly by 2% down towards the floor drain. For added wetroom safety, the shower cubicle is framed by flanges on three sides. The shower screen is mounted in the track on the fixed module, to eliminate the risk of working loose over time.

Combine with: outlet unit, frame, grating/panel and shower screen.

MATLINE

- STYLISH DANISH DESIGN 95
- MINIMISES DIRT IN THE HOME
- EASY TO CLEAN
- CONNECTS DIRECTLY TO DRAIN
- FLEXIBLE SYSTEM, WITH HEIGHT ADJUSTMENT TO THE THICKNESS OF THE TILES
- UV- AND CHEMICAL-RESISTANT NYLON BRUSHES THAT LAST FOR MANY YEARS OF NORMAL USE
- INTELLIGENT BRUSHES THAT STRAIGHTEN THEMSELVES IMMEDIATELY AFTER USE

MATLINE - AN INTELLIGENT CHOICE

MatLine is useful and relevant in every building.

The intelligent mat system consists of: mat, frame, strainer and drain unit. It also comes with a lifting hook to make the mat easier to handle. When the mat is raised, it locks automatically into the raised position. The mat sits flush with the surrounding floor and is surrounded by a slim metal frame in brushed stainless steel. There is a strainer under the mat to catch sand and gravel. Below that is the unit, which is cast into the floor. Height-adjustable feet can be purchased, to facilitate the casting process.

4 PARTS

The Nordic climate is a challenge, with snow, slush, rain and mud for much of the year. Active adults and children can make it difficult to keep a family home clean and presentable. Unidrain's MatLine is a functional and elegant solution to day-to-day problems. The intelligent mat system is connected to the existing pipe system, to drain off excess water and dirt.
