Laboratories

"This is a complex build with resin flooring running through the core areas and laboratories. We needed excellent planning. Stratum and Bolidt offered expertise and flexibility and produced a first-class finish."

– Rob Cooper | Project Manager | Laing O'Rourke

The science of flooring

The lab is the heart of your operations and requires high quality, specialist floors. It's the centre for R&D, quality checks of raw materials and finished products. We are experienced in designing and installing functional and aesthetic floors which meet HACCP standards for hygiene, chemical resistance, Electrostatic Discharge conductivity and ease of maintenance. Our floors repel potential hazards including static electricity, dust particles, dirt, bacteria and chemicals. They are impermeable for low maintenance and use spot conductivity to prevent static electricity.

Bolidtop 525 and FiftyFifty are ideal for main areas in a laboratory building and are available with a textured or textureless anti-slip coating. For sound reduction, choose the Combi system. For back of house or delivery areas, Bolidtop 700, 500 RF or 200 RF are highly durable and wear resistant.

Some images have been supplied by Bolidt for commercial use. For further details please contact info@stratum.uk.com
