MICROTECH

FOR MACRO RESULTS

WHERE INNOVATION MEETS SURFACE PROTECTION

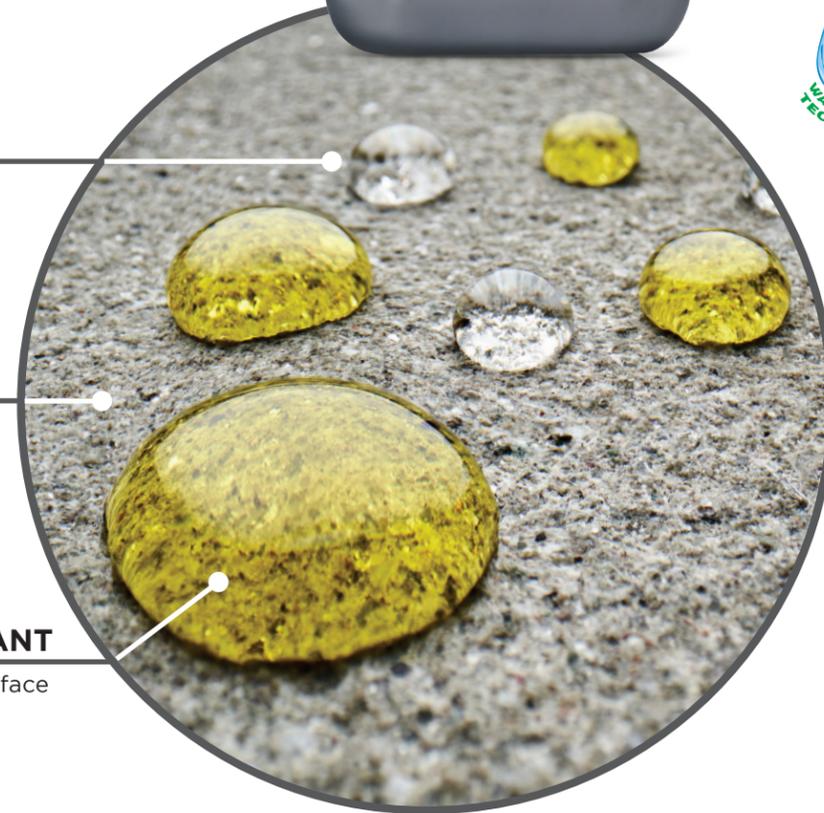

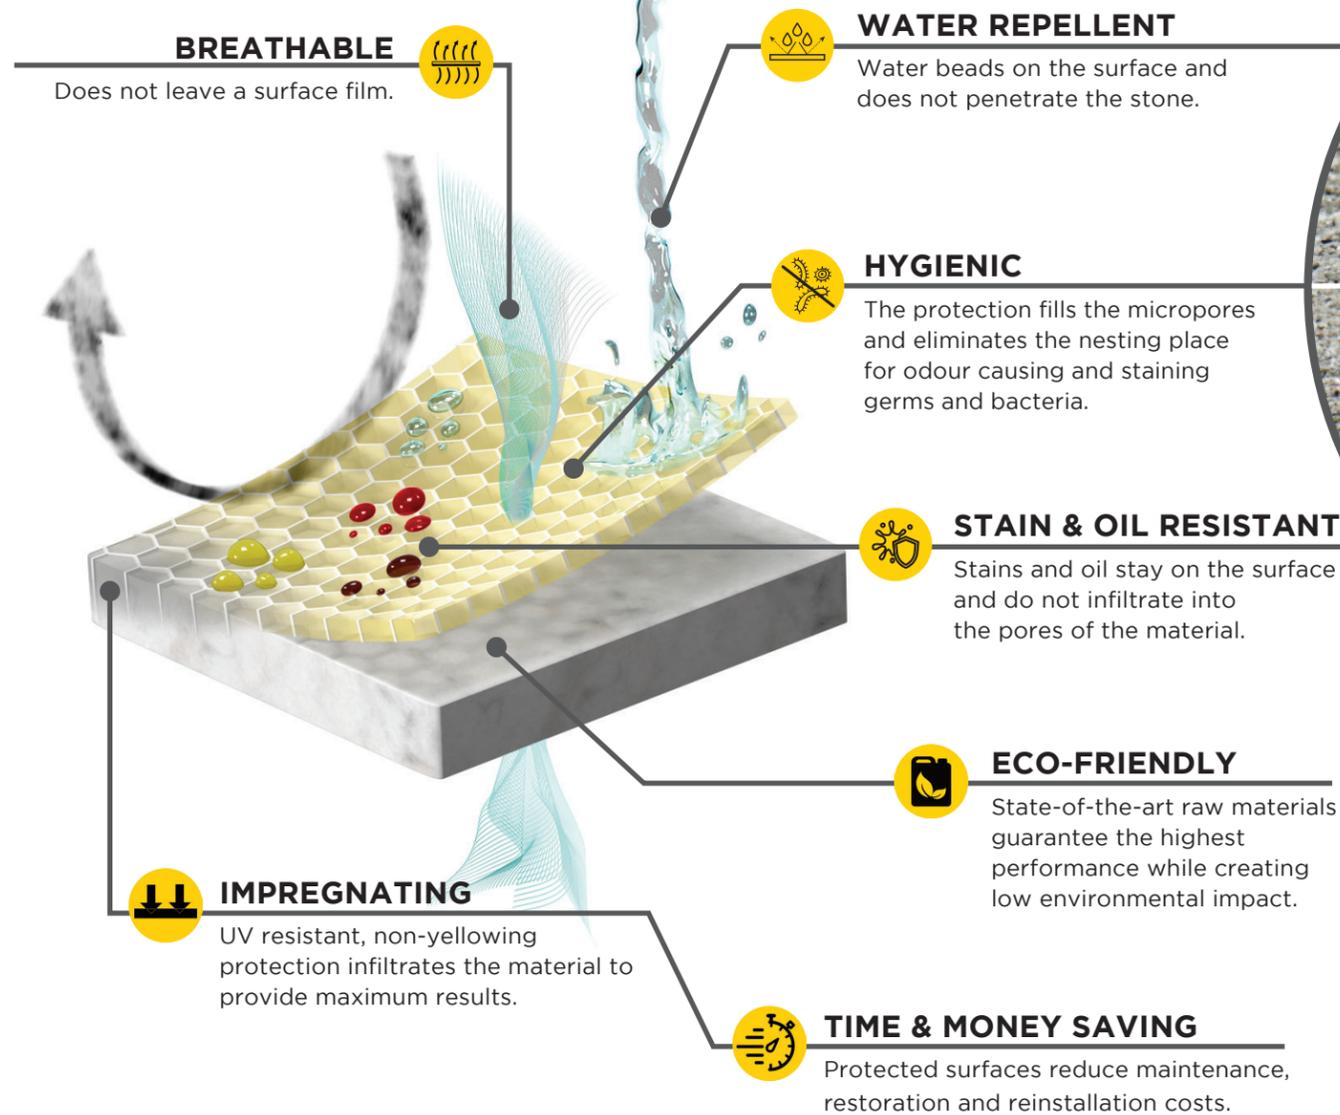

MICROTECH FOR MACRO RESULTS

Stone surfaces contain micropores invisible to the naked eye. If left open, these micropores collect dirt, absorb water and deeply stain the material.

FILA's Innovation Center drew from its 79 years of expertise in surface care and protection to create a unique **MICROTECH** technology that fills micropores and defends the surface of stone and absorbent materials.

The protection begins at the micro level, expanding to deliver **MACRO RESULTS**.

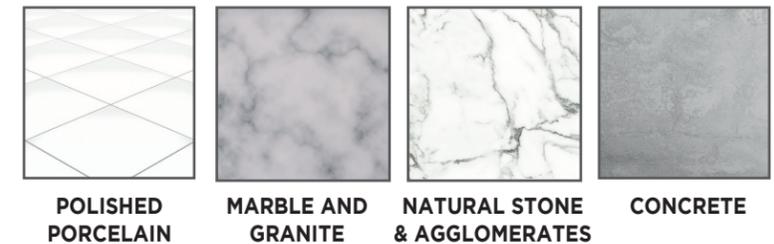

ON THE SURFACE

Powered with FILA's sealer **MICROTECH** technology, **MP90 ECO XTREME** permeates surfaces and micro protects them from the intrusion of water, oil, dirt, and stains, providing premium, long lasting performance.

MP90 ECO XTREME's water based formula provides maximum odorless, fast-drying protection which will not turn yellow over time. Treated surfaces are safe for food contact.

WORLDWIDE

The **Armani Hotel in Dubai** is just one of hundreds of international projects worldwide in which FILA's **MICROTECH** technology protects porous materials to guarantee the most advanced surface protection.
