agricultural waste
into sustainable
surfaces**

pit-board

Made from at least 60% agricultural waste, Pit-Board is a solid, moisture-resistant bio-composite that needs no plywood or MDF substrate and requires no additional edge treatment.

We work closely with both Turkish and Greek Cypriot farmers, sourcing discarded olive pits from across the island. Each batch is blended by hand, giving every panel its own distinctive character and charm.

Dimensions

1400mm x 1000mm x 18mm

1000mm x 1000mm x 18mm

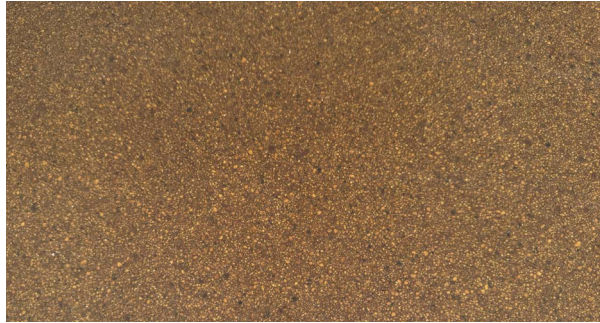

900mm dia x 18mm

Custom sizes available.

A woman with grey hair, seen from the side, is working in an olive grove. She is surrounded by dense olive branches with silvery-green leaves. The text "turning tradition into innovation" is overlaid in the center of the image.

key features

- 18mm bio-composite, no need for a substrate
- Minimum 60% agricultural waste
- No additional edge treatment needed
- Available in 3 colours
- Natural feel
- Moisture resistant
- Food safe

Versatility, designed for bold ideas

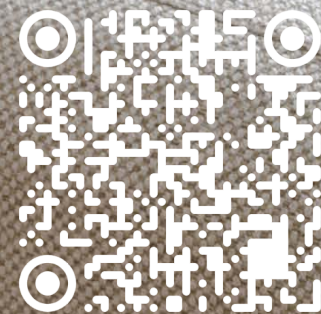

Pit-Board is a versatile material suitable for multiple industries. It's ideal for countertops, shelving, and panels in hospitality, office, and residential design. In retail, it enhances visual displays, windows, and furniture, while in events and exhibitions, it's used for plinths, counters, signage, and partitions. It also supports sustainable, modular furniture designed for disassembly.

our impact

By transforming discarded olive pits into bio-panels, we're building sustainable local supply chains and promoting greener construction globally, while reducing pollution on our island.

Our initiative also fosters inclusion, bringing Turkish and Greek Cypriot communities together. Guided by our manifesto pillar, "Diversity is the spice of life," we celebrate difference rather than let it divide us.
