High- end seamless floors

## EPI. Designed for life.

At its core, a floor is the solid foundation of everyday life. It supports you—whether you're at home, at work, or at the gym. We walk on it, sleep on it, play on it. A floor is used more than any other part of your home. And it lasts longer than anything else. Including you! So, when it comes to choosing a floor, it makes sense to invest the time to find the perfect solution—and the right person to buy it from. After all, it's a pretty fundamental decision. And one you won't be making again anytime soon.

EPI is an established manufacturer of poured flooring systems—specifically, bio-polymer and synthetic resin floors. Developed since the 1980s, and after five decades of innovation, craftsmanship, and fine-tuning in our own factory, we've become true experts in producing seamless flooring. A By EPI floor is a more sustainable, eco-friendly, and flexible alternative to concrete, wood, or polyester. It lasts a lifetime, has a low ecological footprint, and because it's poured on-site, it's seamless, unique, and easy to clean. Plus, you can design it exactly how you want.

Choosing an EPI floor design is simple. You can see, touch, and experience every flooring option we offer in our experience centres. We'll create a proposal based on the style, colour, or finish you have in mind. When you're ready, we'll connect you with our network of selected and trained application partners. They'll ensure your floor is installed professionally—because this is skilled craftsmanship. Once your floor is laid, EPI and our partners remain available. Should you ever need us.

# CORESTONE

NATURE

BY EPI

Corestone Nature® By EPI is made for life—and by life. Versatile, robust, and a perfect fit for any interior. This concrete-look poured floor, built to handle knocks and bumps, is made from natural quartz and hybrid resins. A worry-free, shrink-free alternative to concrete floors, polished concrete, or béton ciré. Whether it's for a flat, terraced home, detached house or garage: the possibilities with Corestone Nature® are endless. This design floor is available in single, solid colours inspired by the power of nature. You can also opt for a blend version (two mixed colours). These floors are on-trend, suitable for heavy use, and remain warm and inviting.

# SUPERBASE<sup>®</sup> | BY EPI<sup>®</sup>

Superbase<sup>®</sup> by EPI is designed for life. Five distinct flooring types, each with its own perfect balance of style, design and durability. This strong PU cast floor, based on high-quality biopolymers, offers a resilient and seamless solution for both your home and office. Superbase<sup>®</sup> floors are wonderfully warm, comfortable and easy to maintain. Thanks to its low sensitivity to pressure marks, Superbase<sup>®</sup> is better resistant to point loads – making it last even longer.

Choose a style and colour that suits your interior from our endless range of finishes.

With the specially noise reduction membrane by EPI, impact sound is reduced by up to 20 dB. Perfect for homes that need to meet specific acoustic requirements.

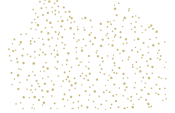

-  Heat conductive

# SUPERBASE<sup>®</sup> CLASSIC BY EPI<sup>®</sup>

Praised for its simplicity and aesthetics, Superbase<sup>®</sup> Classic is the foundation of the Superbase family. This durable and comfortable biopolyurethane floor is made from plant-based oils—like castor oil—and natural fillers. It retains its elastic properties and colour stability, even under UV exposure.

Superbase<sup>®</sup> Classic is available in stylish solid and blend colours.

# SUPERBASE<sup>®</sup> MINERAL

BY EPI<sup>®</sup>

The Superbase<sup>®</sup> Mineral by EPI poured floor is exceptionally well-suited to spaces where high comfort and exclusive design are key. Its seamless finish creates a visual effect that makes rooms appear larger and more cohesive. This tough-elastic floor contains a high percentage of biopolymers and natural mineral fillers.

The Superbase Mineral<sup>®</sup> by EPI is available in elegant Solid and Blend colours.

SUPERBASE  
CORTICA

BY EPI<sup>®</sup>

The Superbase<sup>®</sup> Cortica by EPI is a seamless alternative to linoleum. The addition of cork in Superbase Cortica gives the floor a natural, lightly textured surface. This makes it particularly well-suited to spaces that demand high levels of wear and impact resistance.

## By EPI Design Lab

At the heart of our organization lies the By EPI Design Lab – the place where knowledge, research, and creativity come together. Here, our team works daily to improve and refine the By EPI product range. Every detail matters: from the composition of raw materials and testing of new or improved products, to the creation of new colours and the continuous optimization of ingredients for more sustainable production.

In addition to innovation, quality is one of our core values. In the lab, all produced batches are thoroughly analyzed and documented. Not as a formality, but as a condition for delivering quality. By constantly measuring and learning, we maintain full control over the entire production process. This ensures that every floor leaving our facility meets our high standards — and those of the end user.

But the lab is more than just a testing environment. It's a space where new ideas are born. We explore alternative bio-based materials, consider smart applications, and closely follow interior trends. In collaboration with application partners and designers, we translate these insights into floors that are both technically sound and aesthetically surprising. In other words: Designed for Life.

Designed for life.

### Sustainability

Sustainable thinking starts with the choice of materials – but it doesn't end there. At EPI, we consider the entire lifecycle of our products. We collect data on the environmental impact of our floors, work as much as possible with natural ingredients, and make conscious choices in production, application, and usage.

Because our floors have a long lifespan and require minimal maintenance, they are often more sustainable in use than alternative options. Even during installation, we reduce unnecessary environmental load — for example, by applying over existing floors or offering renovation solutions. We are transparent about our ecological footprint and share substantiated information whenever needed.

“Authority in  
seamless flooring”
