Printed Digital Imagery

Large Laminating Oven

Logo Printing

Digitally Printed Glass Designs

- Print any image on glass
- UV-Proof, Scratch and Weather Resistant
- High Resolution 1440 dpi Printing
- Available in colour, black and white, and sandblast effect
- Print at a wide range of sizes from logo prints to 2 meter wall coverings

Durable Laminated Glass

- EVA-safe thermoplastic is more resistant to heat and humidity, and more transparent than PVB alternatives
- Can be used in conjunction with our printed glass designs for extra tough but stylish glazing

Emergency Replacement Service

- Need a replacement? We can turnaround repeat patterns in a week from start to finish with excellent customer support and communication.

Printed Sandblast Effect

**Toughened to EN12150 and ISO-614
Classification**

STG is a Norfolk based quality glass specialist with a vast array of skills and equipment to produce toughened glass to your exacting standards.

- We produce double glazing in-house alongside laminated and printed toughened glass.
- We can take on small jobs with fast turnaround times alongside our larger projects.
- Our Emergency Service scheme allows for us to quote, design and produce glazing all within one week.

Ceramic Printed Glass

- Custom printed designs ranging from colour imagery and bold patterns to black borders with dot fade edges and our special sandblast effect designs that can be printed at a multitude of densities and sizes.
- Our versatile printed glass is UV Proof and will not fade over time and can be used for external and internal purposes including (but not limited to) kitchen panels, balustrades, balcony glass, table tops, shop signs, house numbers, door glass and table mats.

**Any image, pattern or vector
design printed on glass. UV Proof and
Weather/Scratch Resistant**

**House numbers printed on glass in
colour, etched effect or black and white**

- We currently provide black border glass to prestigious marine companies that produce superyachts. The ceramic black ink is printed on to the glazing before toughening at a thickness that allows no light to appear through the design while remaining flush to the surface of the glass, which allows seamless bonding to the superstructure. Our borders have been tried and tested on ocean faring craft and the print is more than capable of surviving the extreme conditions that can be found at sea.

- Our sandblast effect designs allow us to produce complex, multi opacity patterns and images on glass that would be

extremely difficult to replicate quickly and cost efficiently via traditional sandblasting methods. We are not limited to simple patterns and shapes, our technicians are able to convert photos in to etch style designs to create unique and memorable one off pieces of your most treasured moments.

**EVA Thermoplastic Laminate,
provides added safety features
and strength to our glazing**

Provide additional protection with our laminated glazing

- We use EVA-Safe thermoplastic laminating sheets to bond two pieces of toughened glass together to create extra strong glazing that will not shatter on impact even if cracks are present. The EVA interlayer after laminating is highly transparent and provides superior levels of visibility through the glass while maintaining its adhesive strength.
- All Toughened laminated glass is processed and constructed to customer specification, size and thickness. The product is more versatile than annealed laminated. Laminated glass can also be used in conjunction with our digital printers ceramic inks before toughening

to add a unique finish to the glass . These finishes can be Solid all over, decorative or translucent, or contain a unique/personal image provided by the customer or from our library of images.

Dedicated to our craft— Produced with excellence in mind from start to finish

Quality - Bespoke - Innovation
