

Redwood City | Finance Leaders' Summit: Navigating the Shift to Autonomous Finance through AI

According to Gartner, 64% of CFOs believe autonomous finance will become a reality within the next four years and by 2026, 90% of finance functions will deploy at least one AI-enabled technology solution. But finance leaders must focus their digital investments on the key building blocks.

An autonomous finance function uses technologies that move beyond traditional automation to include capabilities, such as self-learning and self-correction, and can make decisions based on the data they collect. These technologies have the potential to transform all parts of the finance function, from the back office to the office of the CFO. It is critical for Finance and IT to skill up in these technologies or risk being left behind.

In this session with experts from Aptitude Software, Microsoft and HSO participants will:

- Recognize the role of data in an AI-powered Autonomous Finance function
- Identify how to harness advanced reporting, automation and emerging AI technologies to enhance decision-making, improve operational efficiency and unlock new growth opportunities
- Participate in demos that illustrate how to architect the optimal technology framework to achieve a clear, unified view of your financial data.

To register for this session visit, <https://www.aptitudesoftware.com/event/finance-leaders-roundtable-unlocking-ai-na/>. To be awarded the full credit hours, you must be present, registering your attendance and departure on the attendance sheets at the registration desk.

Participants will earn 2.0 CPE credits
