Press Release

11/11/2026

Humanoid Technology Expo is Europe's first component, technology and full supply chain Exhibition for the development and production of Humanoids and Fully Mobile Robots.

With 100% focus on the components, manufacturing systems and complete supply-chain for the creation of reliable, durable, lightweight and intelligent robots, the Expo is a showcase for companies that are already engaged in humanoid development and those that have technologies and capabilities that will be the foundations for this entirely new industry.

Show Founder, Tony Robinson has a lifelong history of creating exhibitions for new and emerging markets* (see panel below). He says "Don't imagine for one minute the supply chain for Humanoids and Fully Mobile Robots is already established because it isn't. Every Humanoid developer is currently in search of the most suitable components, materials and fabrication systems. That's a global phenomenon affecting every Humanoid developer"

Tony is the Founder of Automotive Testing Expo in 1998 which runs in Stuttgart to this day. He makes the point "Testing for reliability, repeatability, durability, light-weighting, long term performance and machine and process learning, are all in various stages of early development along with the search for best technologies in machining and tooling".

Why Stuttgart? Stuttgart is already the European Centre of Excellence in components for Humanoids. One massive lesson has already been learned and firmly established in the region: 'Reliability is King'. Humanoids that break will be a disaster for their manufacturers; it takes just one rogue component. Robinson says, "The highest level of reliability and durability will be to Humanoids what Mercedes Benz and Porsches brought to cars. That's embedded in Stuttgart's history, mentality and people. Along with the fact that I have launched and run shows in Stuttgart since the year 2000, it makes me really happy to be making a contribution to the region's next generation".

The company has already established the Humanoid MegaHub, the world's biggest knowledge platform for the industry which covers every aspect of Humanoid development including the financial and investment perspective.

**** Previous Events Launched by Tony Robinson:***

- Automotive Testing Expo (Global) Stuttgart, Detroit, Shanghai, Seoul, Chennai
- The Battery Show USA and Europe
- Electric & Hybrid Aerospace Technology Expo
- Electric & Hybrid Vehicle Technology Expo USA and Europe
- Future of Transportation World Congress
- Aircraft Interiors Expo (became one of the biggest aviation industry shows within 5 years, now in its 26th year)
- Passenger Terminal Expo (is the world's biggest airport design show, now in its 28th year)
- Parcel and Post Expo (United Nations Organisation supported)
- Tire Technology Expo
- Professional MotorSport World Expo
- ADAS and Autonomous Vehicle Technology Expo Europe and USA
- Electric & Hybrid Marine World Expo
- Aerospace Testing Expo USA and Europe
- IVT Expo USA and Europe (industrial vehicle and off-highway vehicle technology)
- Automotive Interiors Expo
- Safe Highways of the Future
