NEED A FLEXIBLE SECURITY SOLUTION?

Introducing our rapid deployment Human Detection CCTV Tower.

Our mobile tower is trailer-based, making it easy to transport and move around when required. Whether you need to tow it, lift it with forks, or crane it into place, this tower has you covered.

With an 8-metre hydraulic mast that can be deployed in seconds, it provides an unobstructed and expansive field of view for our cameras. Ensuring maximum coverage and protection.

Using advanced video analytics, our cameras can automatically detect humans and vehicles when they cross virtual tripwires programmed within the camera. These tripwires help protect perimeters, plants, and other valuables. If an alarm is triggered, an alert is immediately sent to a remote monitoring station and live images can be viewed.

Each camera is equipped with lights ensuring you have clear visibility and full-colour images at all times, even in darkness. A white light automatically illuminates when it's dark, providing crystal-clear footage. In the event of an alarm trigger, red and blue LED lights will flash to warn you of potential danger.

Our camera towers are equipped with world sim 4G routers, guaranteeing internet connectivity through every UK mobile network provider. This ensures that our solutions always have internet connectivity.

Once the cameras detect any unwanted activity onsite, the camera will sound its built-in siren to warn off any intruders. Once the alarm is received by the remote monitoring station, a live audio warning can be given via the P/A system.

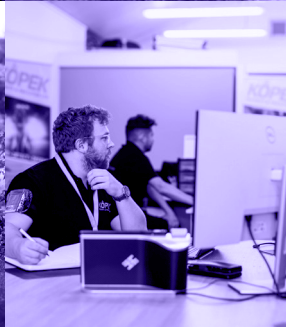

Even without mains power on site our
CCTV towers will run up to 50 days
combining both Solar and batteries.
Where a generator is required, this will
automatically start each day for 2 hours
to charge the batteries. Say goodbye to
power outages with our autonomous
CCTV solutions!

Contact us today and stay powered
up no matter what with our reliable
technology
