

Aircrew Helmets

High standard of service

At our UK facility, Survival Equipment Services Ltd offers full maintenance, including total refurbishment of a wide range of current commercially available aircrew helmets.

Our fully equipped helmet servicing department is run by highly trained and experienced personnel who are able to meet tight deadlines without compromising the standard of service provided.

We strongly recommend that all aircrew helmets get inspected at least once a year. Our basic helmet service includes the following:

- Examination of shell, linings, chin & nape straps, pads, visor mechanism, visors, visor cover, mic/tel downloads & plates
- Cleaning of protective shell, linings, ear capsules & visors
- Testing of headset & microphone function, electrical checks & visor mechanism
- Any repairs or replacement parts would be quoted to the customer following a comprehensive survey

For our vintage aircraft market we offer maintenance and repair of military aircrew helmets, oxygen masks and ancillaries. Helmet refurbishment can also include a full re-spray, colour of your choice. We take pride in offering customers both original manufactured parts as well as the highest quality aftermarket parts for your helmets.

FREE Helmet Fitting Service

There is a FREE Helmet Fitting Service for aircrew who purchase or have their helmets and oxygen masks serviced by SES Ltd. All equipment is fully tested and supplied complete with appropriate Certificate of Serviceability.

On-site servicing

SES can provide an on-site servicing facility to Police and Ambulance units, and private companies for multiple helmet servicing and ancillary related equipment.
