

# RESCUENET® CASEREVIEW: ALL DATA INTEGRATED IN ONE REPORT

## IMMEDIATE POST-CALL

Quickly transmit essential clinical data, including CPR and ventilation quality, ECG, EtCO<sub>2</sub>, and full case summaries directly from an X Series® Advanced or ZOLL AED 3® BLS. With the push of a button, key metrics are wirelessly delivered to QA/QI personnel – accessible from any web-enabled device.

## TRAINING

Establish quality standards for training purposes. When X Series Advanced is used with CPR StatPadz® and AccuVent™, CaseReview makes it easy to set training goals to improve your team's performance. Target your training to address identified areas of improvement, and compare training vs. actual results to drive improved outcomes.

## SAME-DAY DEBRIEFING

Review all the details and data of a call while they are still fresh. Help your team learn what was successful and what needs improvement. The playback tab displays clinical information from your ZOLL devices, including all vital signs, clinical waveforms, and CPR and ventilation quality, in a review timeline.

**AutoPulse and X Series: Two devices, one report**  
Merging data from multiple devices can be complicated and time-consuming. AutoPulse and X Series Advanced both integrate data smoothly into CaseReview without complex data transfers, data cards, and cables. One patient – one report.

## SYSTEM-WIDE QI

Identify trends and areas for improvement by viewing comprehensive data for your entire service – easily accessible through efficient case management and multiple filtering options. Improving outcomes requires a big-picture view of performance data. CaseReview saves valuable time and resources by quickly aggregating critical data such as peri-shock pause times, CPR quality, ventilation quality, and more, and displaying it using intuitive graphics.

## RescueNet CaseReview: Turn Case Files Into Actions

Responding to a critical case like a high-energy trauma or a cardiac arrest can be a complex process. To achieve the best outcome, your team must provide the highest-quality care every step of the way.

RescueNet CaseReview helps you identify opportunities to improve outcomes, reduce risks, and streamline costs for your organisation. Filter options enable you to search, identify, and summarise data, providing an overview as well as comprehensive reports of your ambulance service's operations. This will help your organisation meet clinical governance standards and enable you to continuously improve outcomes and ensure high-quality care.

### ZOLL Online

RescueNet CaseReview is hosted in the secure, reliable ZOLL Online environment:

- Accessible** – efficient cloud-based setup means no local server installation or customer IT resources needed
- Worry-free** – our ZOLL Online solution includes server setup, all necessary database and security updates, maintenance and service
- Secure** – Europe-based server for full EU data security compliance
