

Powering the future of connected healthcare.

About our Connected Emergency Services solution

Visionable's Connected Emergency Services solution enables faster diagnosis and treatment by bringing in the right people and right information at the right time, regardless of location.

Co-created with emergency services, our collaboration platform connects front-line responders and emergency vehicles with remote clinical support during time-critical emergencies, enabling the sharing of patient information, medical device data and live video feeds simultaneously.

Key Benefits

-  Quicker onsite patient diagnosis
-  Accessible care regardless of location
-  Access to remote specialists
-  Reduction in conveyances to A&E
-  Cost saving
-  Speedier hospital handover
-  Increased workforce efficiency

Core components

- **Collaboration Hub** – This central platform offers a bespoke management system to facilitate scene, medical device, and patient data sharing with specialist clinicians to help make informed collaborative decisions.

- **Connected Responder** – Front-line responders can request remote clinical support with the click of a button to accurately diagnose and treat patients at the scene and define the right care plan.

- **Connected Vehicles** – Connecting the ambulances' medical equipment and video cameras with the available tablet and/or mobile devices, enabling the reliable sharing of a 360-degree view of the patient's health with remote clinical support teams to diagnose and treat patients faster.

Benefits in more detail

Safe reduction in avoidable ambulance conveyances and admissions to emergency departments - By diagnosing and treating patients earlier in the care pathway, patients are only taken to hospital if that is the right place for them – saving time, money, and resources.

Providing 'See & Treat' capabilities where needed - Anyone can share live video streams and medical data of the patient with remote clinical support for shared decision making.

Integration into the wider urgent and emergency care system - Our solution connects the right people within the urgent and emergency care system and beyond to improve patient outcomes.

A productive workforce - Pressure is eased by providing front-line responders with access to remote clinical support whenever needed, enabling efficient and effective decision making.
