unblur

Simplifying decision-making

Incident commanders are saturated with huge amount of data from multiple IT sources
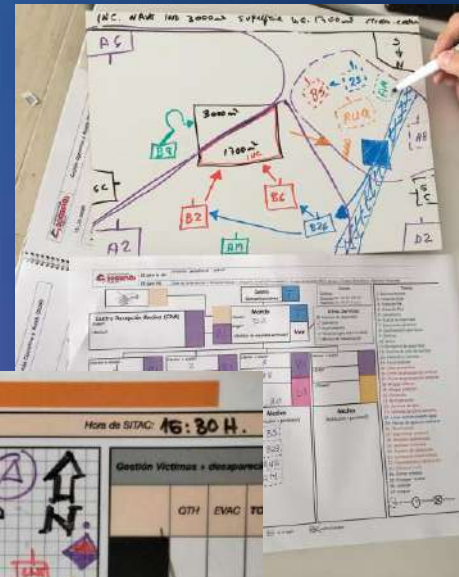

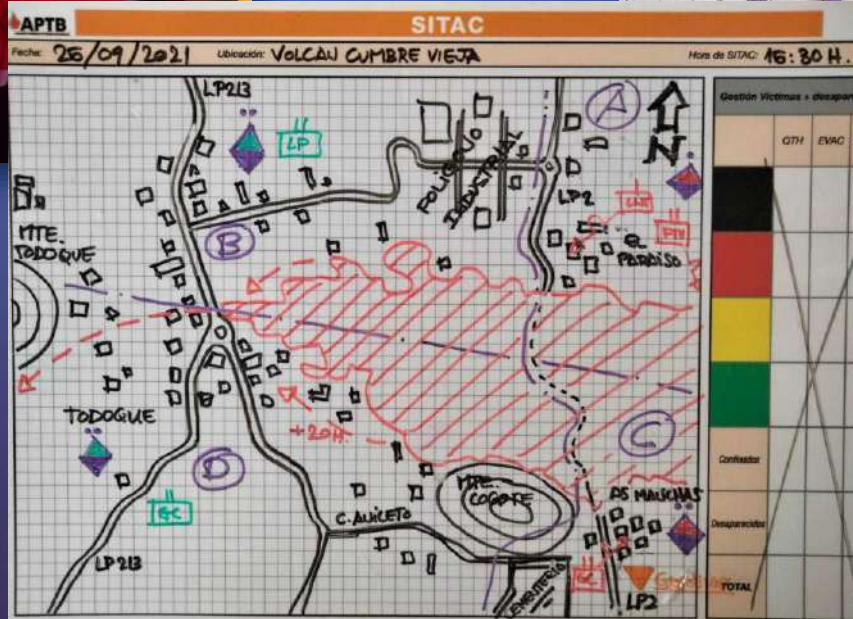

About Unblur

Helping front-line first responders to make faster & safer decisions thanks to data

Unblur has developed **IRIS** an incident command software made for any kind of first responder (fire, law enforcement, search & rescue, disaster relief…). IRIS **integrates real-time information** (video, GIS, geolocation...) and digital incident command tools to support coordination, situation awareness and optimize decision making.

IRIS is operational in real emergencies since 2019 in the UK, helping commanders understand where their assets are, how the emergency is evolving and sharing insights in real-time with other team members and agencies.

Unblur invests +1M€ per year in R+D to constantly improve the service and implement new technologies, in collaboration with our end users and customers.

IRIS CORE centralises **real-time data and tools in a single place.**

unblur

We help Emergency Services improve their operational response at the scene of the incident

IRIS Core is the only complete and affordable end-to-end tool for commanders in the field, revolutionizing the public safety sector by implementing the latest technologies such as wearables, sensors, drones, GIS, and artificial intelligence in the daily work of first responders.

IRIS Core is a software that allows commanders to visualize what is happening, and to know where the teams are at every second and what tasks are being done. Commanders can instantly add and share information like decision logs, messages, and risk assessments between teams and files making coordination much easier.

Protecting lives, properties and the environment

Introduction to IRIS Core

Web-based incident command software. Accessible from any device via a browser.

Tactical Planning
Tactical drawing & incident map annotations (points, areas, pictures…)

Video Streaming
From any source (CCTV, smartphone, drone, helicopter, bodycam…)

Asset Geolocation
Tracking of staff, vehicles, aircrafts and vessels

GIS
Geographical layers, building plans, operational risks…

Messages & Decisions
Voices, multimedia & written logs for decision making, messages & events

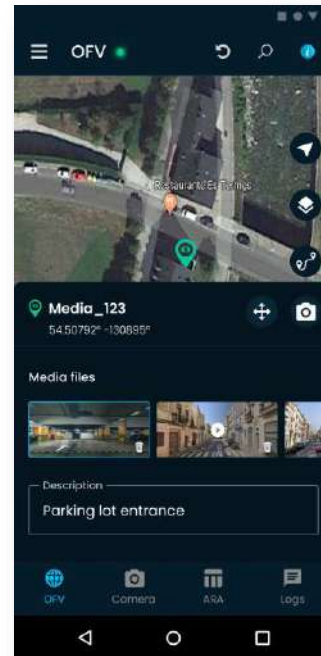

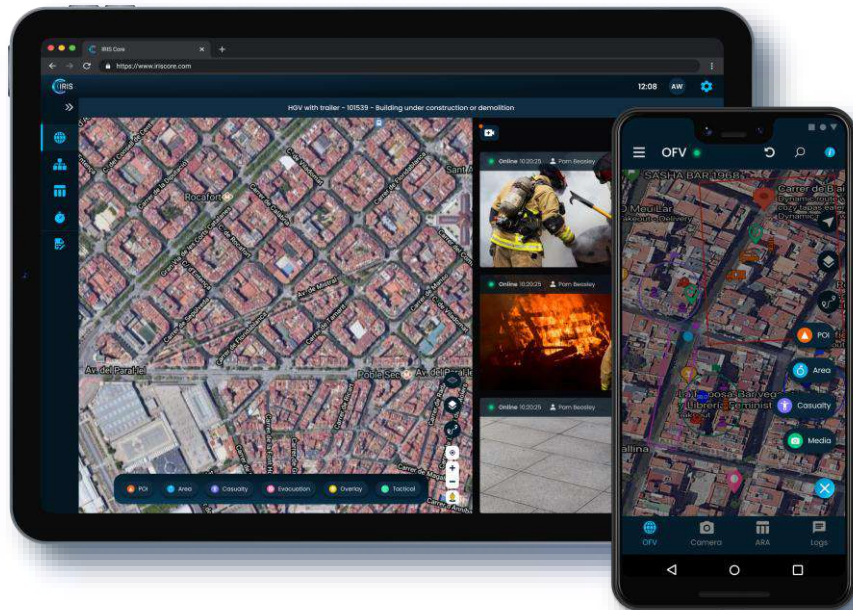

JESIP, FSG, NOGs & ARAs
Manage all relevant forms such as JESIP, evacuation forms, risk assesments, casualties…

Introduction to IRIS Tactics

IRIS Tactics is an Android smartphone app allowing sector commanders and tactical teams to access IIRS from a mobile devices

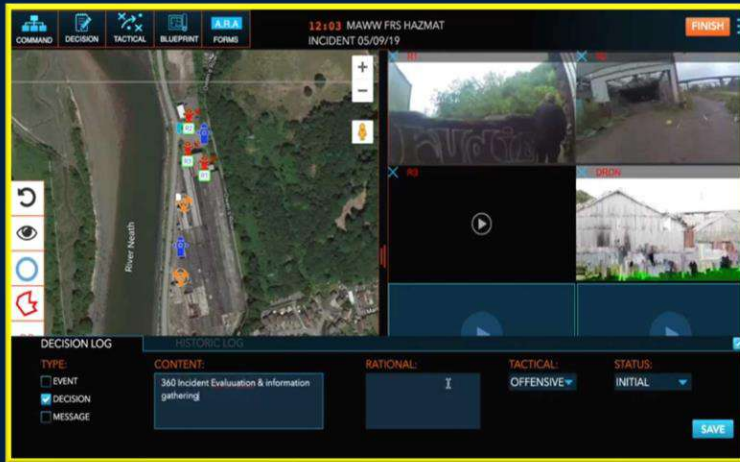

Functionalities

- Real-time geolocation streaming

- Video Streaming

- Share pictures, videos, and annotations in IRIS

- Visualize all relevant information within IRIS such as decision logs, forms, organigrams, team member locations etc.

Available in Google Play
