

# KLICK FAST Crocodile Garment Clip

The Crocodile Garment Clip featuring a KCLICK FAST Dock at the front can be attached to shirt epaulettes, shirt plackets, pockets, belts, trouser pockets, jacket zip openings and skirt/trouser waistbands. It is an easy and quick way to attach a KCLICK FAST Dock to garments for secure, hands-free carrying of KCLICK FAST-enabled portable devices.

The spring-loaded clip opens to allow the back plate to slide inside a pocket or behind a garment then the front of the clip closes over the outer garment. Small, serrated teeth within the jaw of the clip and a strong tension in the spring mechanism ensure a firm grip over fabric.

Devices, including body-worn video cameras, two-way radios and mobile data devices that have a KCLICK FAST Connector fitted to their rear or to their holders/pouches, attach and lock into the KCLICK FAST Dock at the front of the Crocodile Garment Clip. Once docked, the device can be rotated into any of seven ratcheted positions depending on comfort and access preferences.

No matter at which angle the Crocodile Garment Clip is positioned on the garment (e.g. horizontal on a shirt placket), the device can be docked in any orientation (e.g. vertical) or rotated to the preferred angle.

## The KCLICK FAST Crocodile Garment Clip also features:

- A small footprint - enabling it to be as discreet as possible beneath the device and allowing it to fit small as well as large pockets;
- A slim profile - keeping the attached device as close as possible to the body;
- A textured, non-slip surface on its upper front and rear to enable fingers to gain a firm grip when squeezing the clip open.

## Optional Accessory - Anti-Tilt Attachment

In some circumstances, ill- or loose-fitting pockets or garments may cause a device attached to the KCLICK FAST Crocodile Garment Clip to tilt downwards. For body-worn video cameras, this may compromise the quality of the footage captured. Our optional Anti-Tilt Attachment, when fitted to the Crocodile Garment Clip, corrects the angle of the device allowing the lens to be focused in the right direction.

When there are no issues with a garment, the Anti-Tilt Attachment can be easily removed.

Body-worn video camera angled downwards without Anti-Tilt Attachment fitted to the Crocodile Garment Clip

Body-worn video camera angled straight ahead with Anti-Tilt Attachment fitted to the rear of the Crocodile Garment Clip and inserted in a shirt pocket

# How the Anti-Tilt Attachment works

1. The tracks either side of the Anti-Tilt Attachment are aligned with the back of the KLICK FAST Crocodile Garment Clip and the attachment then slides along the clip;
2. The Anti-Tilt Attachment slides all the way until it secures with an audible click;
3. It will then be fully assembled to the Crocodile Garment Clip;
4. The top of the Crocodile Garment Clip is squeezed to expose the serrated teeth;
5. Both the assembled Anti-Tilt Attachment and the back of the Crocodile Garment Clip are inserted into a pocket or behind a piece of cloth and the front of the clip then closes over the outer garment;
6. The Anti-Tilt Attachment is removed by pulling back the lock and sliding the attachment down and away from the Crocodile Garment Clip.

## Specifications:

**Dimensions:** Crocodile Garment Clip: Length: 90 mm (3.54 in); Width: 48 mm (1.89 in); Depth: 21.75 mm (0.86 in)  
Anti-Tilt Attachment: Length: 122.5 mm (4.82 in); Width: 54.5 mm (2.15 in); Depth: 22.5 mm (0.89 in)

**Weight:** Crocodile Garment Clip: 0.040 kg (1.4 oz) approx.;  
Anti-Tilt Attachment: 0.022 kg (0.78 oz) approx.

**Material:** Front Moulding and Anti-Tilt Attachment: High-impact nylon in black;  
Rear Moulding: Polycarbonate ABS in black;  
Spring and Pin: Stainless steel
