

# Prove, Prevent & Protect with MANTIS™

With 3,997 goods vehicle drivers killed or injured in 2019, managing road risk must remain a priority. MANTIS connected LCV camera solutions help companies to mitigate their risk against insurance costs and keep drivers safe on the road.

## **Quick and convenient:**

- Automatically uploads footage of driving events to the cloud for instant review and download
- No manual DVR or SD card reformatting required

## **The Best Connectivity**

- Remote access and download footage via 4G M2M multi network sim providing the strongest signal coverage possible.
- Live view of all cameras accessed directly within WEBFLEET
- The MANTIS app keeps you connected and gives you access to footage while out of the office
- 1GB Aggregated Sim. Never run out of data or get stung with big data overage fees

## **Minimise Risk of Video Loss**

- Automatic alerts users to any loss of video or memory failure
- Highest quality self-formatting SD cards & DVR's reduce risk of recording loss
- Back-up memory on DVR provides twice the recording capacity in a lower resolution, reducing the chance of something important being over written or lost

## **Supports Driver Training:**

- Enhance driver training with camera footage to show drivers exactly how they can improve

## **Integration with Webfleet Solutions**

- MANTIS and Webfleet Solutions have created a multi-layered integration which allows you to:
- View footage of severe g-force events automatically uploaded to the Evidence Centre
- View cameras on your vehicles in real time
- Receive email notifications about severe driving events with direct link to video which can be shared or downloaded

# HOW **NON-CONNECTED** SYSTEMS CAN **LET YOU DOWN**

## LOST FOOTAGE

- SD card systems need to be manually formatted every 8-10 weeks which is extremely time consuming and will result in high rates of video corruption if forgotten. Have you got time in your day to format SD cards?

## SLOW TO ACTION

- Accessing the footage can be slow particularly with incidents when the police are involved, or the vehicle has been damaged. If the vehicle is taken away sending someone to retrieve the footage can be difficult. Early notification with the video evidence is vital for your insurance company to keep control of costs.

## INCREASED FEES

- Delays in accessing the video evidence can incur unnecessary or excessive costs e.g. legal fees, loss of earnings through vehicle downtime, hire vehicles, insurance pay-outs or increased premiums.

## FAILED RECORDING

- Unless you manually check each camera regularly there is no way of knowing if its recording until it's too late. If a camera misses an incident this can result in non-fault claims ending up as own-fault due to lack of evidence which can have a massive impact on the total cost.

## SMALL MEMORY

- Many systems come supplied with a small 32GB memory as standard which can result in video evidence being overwritten before you've had chance to retrieve it.
