

# Continental Verified Inspection

as comfortable as it is compliant.

Regardless of whether it's a truck or a bus, the authorities in the UK always require written proof of daily vehicle inspections. Special attention must be paid to checks on the transport of dangerous or heavy goods. In addition to the fines imposed by the state, private legal claims can have considerable financial consequences in the event of an incident.

With Continental Verified Inspection, you are always on the safe side. Because with digital solutions, you optimize the vehicle inspection process. To do this, you simply attach small digital NFC tags to the points on the vehicle that need to be inspected. Your drivers confirm their inspection by scanning the tags with their mobile phones using the smartphone app. Once all inspection steps have been completed, a report is automatically uploaded to the web portal and can be viewed by fleet managers or workshop employees.

### All benefits at a glance

- Save time and money thanks to direct link to workshops
- Manage and coordinate reported defects from drivers directly in the Web Portal and prevent unnecessary downtimes
- Always be compliant with DVSA and/or SQAS
- All reports are digitally archived and quickly available for inspections by the authorities
- Asset tags and Zone tags can be attached simply, individually and uncomplicatedly
- Departure inspection and documentation is also possible without tags
- Increase benefits through API integration with third party systems

Inspection zones can be defined completely freely and individually in our Inspection Builder. This means, for example, that you can divide your vehicle into 3 inspection zones and therefore attach tags to the most important inspection points to obtain a verifiable confirmation of the inspection.
