

# OSPREY

## HIGH COMFORT BASE LAYER

The OSPREY range consists of a one-piece undergarment available with integral or separate hood and socks. The OSPREY is a high comfort, high protection carbon base layer. It has been designed and tested to be worn as an undergarment in conjunction with outer layers.

It provides protection against chemical warfare agents when utilised as a protective system and for emergency evacuation from a hazard zone and accords requisite protection for immediate movement away from the hazard area.

Frequently worn covertly, with good air permeability allows for long periods of comfortable wear.

### HIGHLIGHTS

- High protection, maximum comfort
- High air permeability
- Low physiological burden
- 24-hour protection
- Minimum 20 times launderable\*
- Minimum of 10 years shelf life\*\*
- Available with integral or separate hood options
- Complies with/exceeds NATO - AEP-38 Directives

\*Contaminated suits should never be laundered and should be appropriately destroyed.

\*\*When stored as per the user guide, the garment will maintain its protective capability.

# CBRN PROTECTIVE SOCK

The OPEC CBRNe Protective SOCK provides high protection to the foot and lower leg. It integrates with any of the Over-garments and Base Layer garments within our range.

The SOCK is made from a 100% activated carbon fibre laminated to a 100% polyester protective scrim. This provides comfort and protection whilst wearing boots/shoes.

## HIGHLIGHTS

- 24-hour protection
- Lightweight and air permeable
- Integrates with all our garment systems
- Minimum 20 times launderable\*
- Minimum of 10 years shelf life\*\*

## About OPEC CBRNe

OPEC CBRNe is a designer and manufacturer of high comfort, high protection chemical, biological and antiviral suit systems.

OPEC became distributors of the long established Remploy range of CBRN suits in 2004. In 2015, OPEC CBRNe was established to take over the design and manufacture of the Remploy CBRN range of suits. Since then, our UK based team has been dedicated to maintaining the Remploy legacy by developing suit systems which optimize end user comfort without compromising protection.

We have innovated and improved chemical and biological suit systems to provide the lightest, most comfortable PPE for both CBRN and antiviral protection.

In 2019, our leading product, the KESTREL, was selected by the Australian DoD as their sole sourced CBRN ensemble as part of a 10 year supply contract. The Kestrel is our two piece medium protective ensemble.

We have manufacturing capability across the world in locations including the UK, EU and Asia, with expertise in supplying large volumes as well as smaller MOQ's.
