# WHO WE ARE

BTL Industries has become one of the world's major manufacturers of medical and aesthetic equipment with direct offices in more than 65 countries around the world.

We have become a market leader in non-invasive treatments, the fastest-growing segment of medicine.

NERVE IMPAIRMENT  
AND SPASTICITY

POST TRAUMATIC  
AND POST SURGICAL CONDITIONS

## High Intensity Laser 2

The therapeutic effect of laser light is based on iostimulation and the acceleration of cellular processes that contribute to pain reduction and faster recovery after injury. The photomechanical wave stimulates nerve endings, which leads to pain relief. Biostimulation of the affected tissue increases oxygen uptake and improves blood circulation.

The unique combination of 30W power and 1064NM wavelength targets deep-lying tissues, maximises pain relief and delivers strong thermatic therapies within a short time.

## Super Inductive System

The intense electromagnetic field triggers action potential and depolarises the nerves, resulting in muscle contractions.

The Super Inductive System is designed to treat painful neuromuscular and joint-skeletal conditions without operator assistance. This versatile technology can cover:

- Acute and chronic pain
- Muscle relaxation
- Muscle stimulation
- Joint blockage release
- Support of fracture healing

## EMSELLA

Feel empowered and confident with Emsella, a treatment against incontinence. The unique HIFEM procedure helps intimate health and wellness by providing those suffering from incontinence with a completely non-invasive option.

BTL Emsella uses electromagnetic energy to cause deep pelvic floor muscle stimulation without getting undressed! A single BTL Emsella session brings thousands of Kegel-like contractions which help you train your muscles without any effort. Scientific research shows that 95% of treated patients have reported significant improvement in their quality of life.

## Radial Shockwave

The radial shockwave causes mechanical stimulation and carries a high dosage of energy to trigger regeneration and reparation processes.

The first-choice treatment in chronic conditions such as superficial tendinopathies, calcifications, and persistent pain of muscles and tendons.

## Focused Shockwave

Focused Shockwave Patented electroacoustic technology delivers the longest lifespan of 3 million shocks with constant intensity.

The perfect balance between energy flux density and focal zone allows for delivering a high amount of energy to a large area

An intelligent applicator with continuous monitoring of shock intensity ensures easy and smooth operation.

The highest frequency range on the market covers a wide spectrum of indicators.
