

Situate

Real-time human movement insight, for Smart Environments

We take a different approach to crowd monitoring by offering a system which is being trained to alert operators to incidents in real-time. The system provides detailed tracking information, giving a deeper understanding of the density and flow of people in an environment to improve safety, security and customer experience.

360° Lidar replaces cameras for complete anonymisation

Integrates with your space-data (e.g. departure times) in real-time

Fixes above line-of-sight, out of the way of customers

Plug and play install in under 30 minutes with no disruption

What are the benefits?

- Create Seamless operations
- Improve security and safety
- Better planning and foresight
- Optimise partner revenue
