

Data Analytics Accelerator for Policing

At Simpson Associates data is in our DNA. As a Microsoft Solutions Partner and proven experts in the police sector, we have worked with many UK forces helping them overcome their data challenges, implementing a range of data and analytical solutions using the Microsoft Platform, including Power BI and other real time reporting solutions.

Data consolidation into a single repository not only ensures quality and accuracy for analytics and new technology; it enables easy and secure data sharing with other forces and agencies, at a time when collaboration is needed more than ever. But for many forces, often the biggest question is where to begin?

We have been helping the Police sector with their data requirements for many years, and with our extensive knowledge and experience within the sector, we have developed the Data Analytics Accelerator for Policing - a packaged solution to accelerate your adoption of analytics.

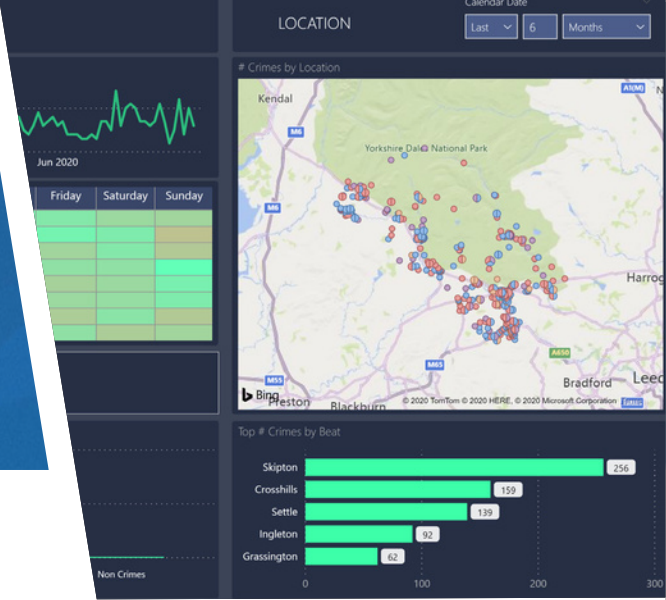

Testimonial:

“We chose Simpson Associates to help implement a new reporting solution for us, because of their expert knowledge within the Police sector and their Gold Partner Status with Microsoft.

They communicate clearly and follow through on their promises. They also proved to be very flexible in their approach, providing additional support for critical issues that we needed help to resolve. We wouldn't hesitate in recommending Simpson Associates to other Police Forces in the UK.”

Tina Shannon

IT Programme Manager, Cheshire Constabulary

Why choose Simpson Associates Data Analytics Accelerator for Policing?

- ✓ An end to end cloud-based analytical solution built in Microsoft Azure
- ✓ Overcomes your disparate data source challenges
- ✓ Improved visibility & confidence in your data
