

BlackBerry SecuSUITE

Secure Communications for Government Operations

Secure communication is under constant threat in today's adversarial world. Traditional communication tools like public phone networks, consumer-grade apps, and enterprise productivity suites fall short for mission-critical security. BlackBerry® SecuSUITE® is purpose built to protect the most sensitive communications.

Challenges

Eavesdropping	Attackers exploit vulnerabilities in mobile networks or unsecured communication applications to intercept phone calls, messages, and two-factor authentication codes. This allows them to access private conversations, sensitive data, and critical information, creating opportunities for privilege escalation and compromising security.
Identity Spoofing	Adversaries can impersonate trusted contacts through sophisticated spoofing techniques, leading to compromised information exchanges and fraudulent communications. This risk is particularly acute for high-trust communications channels.
Metadata Exploitation	While message content may remain encrypted, adversaries can monitor communication metadata — revealing who communicates with whom, when, and how frequently. This pattern analysis exposes organizational structures, relationships, and activities without accessing communication content directly.
Insufficient Controls	Lack of audit trails for consumer-grade messaging means no visibility if information is shared or copied, making compliance oversight, and post-incident forensics nearly impossible. Furthermore, dependency on third-party cloud services means users are at the mercy of their commercial terms of service and their jurisdictional laws.

Solution Overview

BlackBerry SecuSUITE is the gold standard for securing mobile communications. Designed for high-stakes environments, it protects calls, messages, and data with end-to-end encryption and cryptographic identity validation. Independently evaluated and approved by agencies such as NATO and NIAP, BlackBerry SecuSUITE eliminates metadata exposure, allows complete control of every communication layer, and adapts seamlessly to any environment. With over a decade of expertise, SecuSUITE empowers organizations to communicate with trust, even in the most challenging environments.

Outcomes

- **Sovereign Control:** Take full control of your communication infrastructure with a solution designed to meet diverse deployment needs. Whether on-premises, private cloud, or hybrid, BlackBerry SecuSUITE flexibly aligns to your unique requirements. By operating independently from vulnerable public networks, it ensures reliable and truly private communication.
- **Seamless Integration:** Easily deploy the solution across your existing devices and systems. BlackBerry SecuSUITE offers an intuitive interface, requires minimal training, and seamless integration across iOS and Android keeps your team connected effortlessly.
- **Proven Reliability:** BlackBerry SecuSUITE is trusted by governments and organizations worldwide for its reliability and performance. Backed by the highest security certifications, it empowers confident operations in the most demanding environments.
- **Beyond Standard Encryption:** Safeguard your communications with NSA-certified encryption, ensuring top-tier protection against unauthorized interception and eavesdropping. With role-based security management, you can maintain strict access control to reinforce your communication infrastructure.

Use Cases

- **Mission-Critical Communications:** BlackBerry SecuSUITE protects the communications that shape global security, diplomacy, and critical infrastructure. From the Five Eyes alliance and NATO to governments across Asia, Africa, and Europe, our platform secures the most sensitive operations.
- **Travel Communications:** Traveling leaders face surveillance risks when using untrusted networks. BlackBerry SecuSUITE protects calls and messages with end-to-end encryption, operates independently of local systems, and is simple to use.
- **Protecting Intellectual Property for Global Manufacturers:** Sharing sensitive data creates risk. BlackBerry SecuSUITE secures communications and file-sharing, protects metadata, and helps ensure compliance with data protection standards.

When communication is mission-critical and control is non-negotiable, BlackBerry SecuSUITE is the right choice.
