

EASY PULSE

Efficient and compact mechanical CPR

EASY PULSE

Improving CPR quality with SCHILLER's EASY PULSE:

- ✧ Ideal for confined spaces and aircraft, thanks to its small size and light weight
- ✧ May be used in a head-up position of up to 45°
- ✧ Delivers more consistent rate and depth than manual chest compressions

EASY PULSE provides efficient and consistent CPR during the rescue process

IMPROVE CPR QUALITY AND EFFICIENCY

Performing manual chest compressions well for an extended period of time is very challenging. With EASY PULSE, emergency responders can focus on other critical tasks while the device provides automatic chest compressions at a consistent rate and depth. SCHILLER's EASY PULSE is a portable, stand-alone solution for more effective resuscitation.

CPR IN ANY SITUATION

EASY PULSE is directly attached to the patient's upper body and can thus be used in any situation. Thanks to its small size, EASY PULSE is also ideal for confined spaces in disaster situations and accident sites. CPR can be performed even during patient rescue.

CPR IN HEAD-UP POSITION

EASY PULSE can be used in a head-up position of up to 45°, ensuring consistent CPR quality even during stair or rope rescues.

IDEAL FOR AIRCRAFT

EASY PULSE is such a simple device that a single person can operate it. Its size and weight are unparalleled: EASY PULSE opens up entirely new possibilities, e.g. for air rescue services.

SOPHISTICATED TECHNOLOGY

The EASY PULSE has a unique combination of piston and band which allows a multidirectional 3D compression and therefore maximum efficiency.

The weight of the device is evenly distributed over the baseplate and not on a single point and therefore has no influence on chest compressions or on the recoil.

TWO TYPES OF SLIDER

The double slider complements the standard version by providing a wider base for enhanced stability during extended periods of use. Two additional safety straps prevent the device from sliding up.

CHARGER

One battery can be charged in the left slot in fast charging mode (80% charged in 45 minutes). Two batteries can be charged simultaneously.

POWER SUPPLY

Replaceable battery with charge level indicator. Autonomous operation for 45 minutes (with one battery). Option to change the battery during operation when power is supplied by the vehicle or mains.

EASE OF USE

Pressing two buttons is enough to initiate resuscitation immediately

SMALL SIZE

Ideal for limited spaces, such as in disaster relief operations

POWER CONNECTION CABLE

Power supply for 100VAC to 240VAC input voltage. EASY PULSE can be directly operated using a 12VDC to 48VDC power source via a connection cable.

LIGHTWEIGHT

Unbelievably small and lightweight CPR device

FAST HOOK-UP

Colour-coded straps to speed up patient hook-up. It only takes 15 seconds for trained personnel to attach the device thanks to the convenient buckle system.

EASY TO MOUNT

Thanks to a slider and buckle system, it can be easily attached to the upper body. Easy to position – easy to operate.

COMPREHENSIVE

Option of 30:2 compression-ventilation cycle
