POWER
SOLUTIONS

WHO ARE WE

We are an award-winning specialist supplier and installer of integrated auxiliary power, climate control and water purification systems.

With a strong engineering foundation and three decades of experience in the marine, defence, and specialist vehicle sectors, we have built a reputation for delivering reliable products, solid technical support, and straightforward customer service.

We are a family-run business based in Verwood who was one of the first in the industry to achieve the ISO UKAS 9000:2015 accreditation.

ENGINEERING EXCELLENCE

Our in-house engineering team designs, integrates, and supports systems tailored to the demands of commercial operators, specialist vehicles, defence platforms, and leisure users alike.

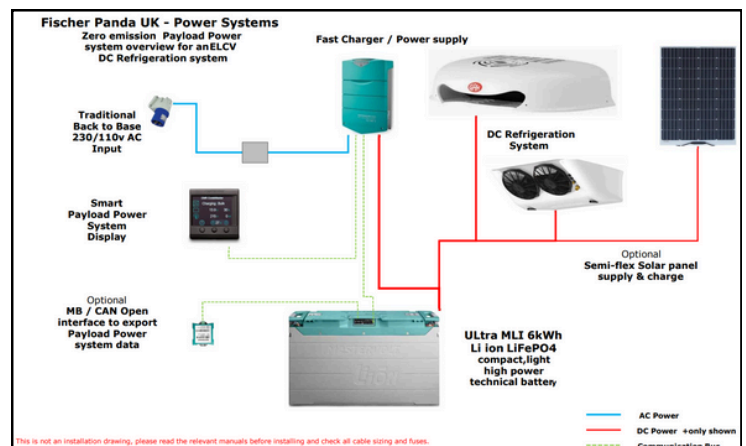

From standalone installations to fully integrated hybrid systems, we ensure every project meets the highest standards of performance, safety, and reliability.

Rooted in British engineering values, we pride ourselves on combining innovation with robust craftsmanship. We collaborate closely with our customers from initial consultation and custom design, through installation and ongoing support, ensuring solutions that truly fit their unique operational needs.

CASE STUDIES

Born from a marine servicing environment, our business has grown with a hands-on approach that still defines how we work today: practical, problem-solving, and focused on what performs reliably in the field.

DELIVERING RELIABLE SOLUTIONS

Generators

Compact, silent and clean variable-speed diesel generators for reliable onboard power. The HVO-approved generators are trusted worldwide in demanding environments, from marine, specialist vehicle to defence.

Power Electronics

Powerful and smart energy conversion, distribution, and battery management solutions for complex installations.

Climate Control

Practical, intuitive, reliable and energy-efficient air conditioning and climate control systems.

All-In-One Power

Compact, integrated lithium-based power systems for mobile applications — ideal for reducing generator run time and enabling quiet operation.

Fuel Cell Technology

Clean, silent, and low-maintenance power generation for remote and off-grid environments.

Solar Power

Integrated hybrid system solutions can involve various power sources, including the popular solar power to maximise the vehicle's rooftop area.
