

BLUE LIGHT ASSET MANAGEMENT MADE IN THE UK

Innaxys TRAM is a modular, cloud-based platform that manages operational assets, fleet vehicles, and associated user training records – all within a single solution.

The featureful system with easy-to-use workflows fully supports the asset lifecycle from acquisition and tagging through to maintenance, usage, and disposal.

Designed with and for users in UK blue light and operational environments, TRAM delivers asset readiness, compliance, and traceability.

INNAXYS

TRAM

Digitise & centralise your asset management function with a modern cloud solution delivering daily workflow efficiencies and greater compliance, oversight, & control for asset managers and operational teams.

Innaxys offers an innately flexible system that can match different organisational needs & requirements, whilst ensuring an industry-standard lifecycle management of all assets on one place – including operational equipment, fleet vehicles, supplies, & parts.

- ✓ Manages all asset types in one central system
- ✓ Equipment & fleet management modules
- ✓ Asset utilisation tracking: condition, movement, & usage
- ✓ Works with asset identification systems: tag & scan
- ✓ Maintenance planning & delivery
- ✓ Training management & competency-based asset booking
- ✓ Mobile working options

MODERNISED, INTEGRATED ASSET & FLEET MANAGEMENT

FOR MOBILE GROUND TEAMS

Provide crews in the field an easy-to-use mobile platform to assist with the management of their assets, and record inspections, checks, and maintenance activities

- Scan assets to view detailed records instantly
- Carry out fast & accurate inventory checks
- Report & record lost, moved, or faulty assets
- Check task list & allocate work orders
- Complete maintenance & inspection tasks
- Syncs instantly with main web app

FOR ASSET MANAGERS

Manage inventories and enjoy full visibility over asset usage and maintenance activity, through a feature-rich, fully synced web application

- Track outstanding checks, inspections, and maintenance events
- Assign tasks to individuals or teams
- Create and allocate maintenance and repair campaigns
- Record and manage user training and competencies
- Monitor asset location, status & lifecycle history
- Generate insights & identify trends through integrated reporting tools

FOR MANAGEMENT INFORMATION, AUDIT & COMPLIANCE

- User access control & authentication
- Data security & encryption
- All actions and activity traceable and auditable
- Extensibility to link with other systems
- Alerts & notifications
- Reporting & dashboard analytics
- Version controlled document storage
