

Eco SMART

Evaluating Your Climate Change Sustainability Journey

UK organisations are on a mission to meet the Climate Change Act 2008 requirements, to reduce carbon emissions and achieve net zero by 2050, with varying stages of progress.

Navigating the pathway in reducing emissions can seem daunting, however remarkable and sustainable progress can be achieved by adopting effective strategies that support your organisations ethos.

Eco SMART, TIAA's Climate Change maturity assessment tool, has been designed to support your journey in way that is sustainable and within your financial and non-financial constraints.

Our specialists will evaluate your net zero road map, uncover risks and gaps and provide actionable steps to meet your business objectives and government expectations.

UK's Role and Progress

The UK Climate Change Act 2008 set a more ambitious target in 2019, to reduce greenhouse gas emissions by 78% by 2035 compared to the 1990 level and reaching net zero by 2050 (Scotland by 2045).

The UK's Climate Change Committee (CCC), an independent statutory body, provides advance Carbon Budgets to help the UK set and meet key milestones towards the 2050 goal.

We are currently working in the 4th Carbon Budget (2023-2027), agreed by Government in June 2011, with budgets 5 and 6 in place and the 7th budget (2038-2042) having been released on 26th February 2025, setting a new pathway to a decarbonised UK. It raised that emissions must be reduced by 87% by 2040.

The CCC will unveil it's 2025 Net Zero Progress Report at the Climate Innovation Forum on 25th June 2025, during London Climate Action Week.

How we can help you

We understand that the road to meeting your climate change objectives carries it's own set of unique challenges for your organisation. Our unique Eco Smart tool provides us with a framework to effectively evaluate your business plans, your journey, identifying gaps and areas for improvement to meet your goals in line with government expectations.
