

First on Scene Courses

Would you know what to do if an emergency happened in front of you?

Our First on Scene courses are designed specifically for farmers, equestrians, bikers and mountain bikers, providing practical, hands-on training to help you respond confidently during the critical moments before emergency services arrive.

These industry-focused courses teach lifesaving skills tailored to the unique risks and challenges faced in rural, agricultural and outdoor environments. Participants will learn how to assess an incident, manage serious injuries, provide immediate care and communicate effectively with emergency responders.

Delivered by experienced clinicians from The MAAC Academy at our airbase or at your venue, these engaging sessions equip you with the confidence and knowledge to make a real difference when every second counts.

Available Courses:

- First Farmer on Scene
- First Biker on Scene
- First Rider on Scene (Horses)
- First Rider on Scene (Mountain Bikes)

Be prepared. Be confident. Be the difference

Why We Developed First on Scene Courses?

At The MAAC Academy, we see first-hand how the actions taken in the first few minutes following an incident can make a significant difference to patient outcomes.

Many emergencies occur in environments where access can be challenging and professional help may take time to reach the scene. Drawing on our extensive experience in pre-hospital emergency care, we developed our First on Scene courses to give individuals the confidence, skills and knowledge to act safely and effectively until emergency services arrive.

Our aim is simple: to empower people working and enjoying activities in rural and outdoor environments to become capable first responders when it matters most.

Learn lifesaving skills from the clinicians who respond to emergencies every day.

Industry-Focused First Aid Training Delivered By Experienced Clinicians

First Farmer on Scene

This course is suitable for anyone working or living in a rural environment and any person who feels they may need to give immediate support at the point of injury.

This practical (3-hour) course is designed to give the candidate the skills and confidence to manage a casualty at the point of injury before the arrival of emergency teams. The course will cover key skills including casualty and scene management, with hands-on practice under expert tuition, including simulated activities.

First Biker on Scene

This course is suitable for all bikers and any person who feels they may need to give immediate support at the point of injury involving a biker or motorbike.

This practical (3-hour) course is designed to give the candidate the skills and confidence to manage a casualty at point of injury prior to the arrival of emergency teams. The course will cover key skills including casualty and scene management, with hands on practice under expert tuition including simulated activities.

First Rider on Scene (Horses)

Falls from height, kicks, crushing injuries and remote locations mean that serious incidents can occur suddenly within equestrian settings. This course focuses on managing those critical first moments safely and effectively.

This practical 3-hour course is designed to give riders, horse owners and equestrian professionals the skills and confidence to manage a casualty at the point of injury before the arrival of emergency services.

The course covers key skills including scene safety and casualty management, with hands-on practice under expert tuition. Learning is reinforced through realistic, equestrian-relevant scenarios, reflecting incidents that may occur when riding, handling horses, or working in yards, fields, or rural locations.

First Rider on Scene (Mountain Bikes)

This practical 3 hour course is designed to give mountain bikers the skills and confidence to manage a casualty at the point of injury before the arrival of emergency services.

Mountain biking often takes place in remote or difficult to access locations, where high speed impacts, falls, and collisions can result in serious injury. This course focuses on managing those critical first moments safely and effectively until professional help arrives.

The course will cover key skills including scene safety, casualty assessment, and early casualty management, with hands on practice under expert tuition. Learning is reinforced through realistic scenarios that reflect incidents commonly seen on trails, bike parks, forestry tracks, and rural riding areas.
