## Carrying bodily fluids is no longer high risk.

A sachet of **VernaGel** solidifies up to 1.2 litres of bodily fluids in seconds, reducing the risk of spills and infection.

### What is it?

VernaGel is a dry granule with rapid absorption properties. VernaGel stabilises bodily fluids and other medical waste in seconds, transforming them into an easily transportable, semi-solid gel.

### Why VernaGel?

Prevents spillages  
& accidents

Helps reduce the  
spread of infection

Minimizes & eliminates  
residual odours

Improves patient and  
healthcare worker dignity

Reduces nurses  
workload

Saves laundry  
costs

**VernaGel is a revolutionary product exclusively supplied by Vernacare and used worldwide.**

## How does VernaGel work?

**1.** Place one sealed VernaGel sachet into a container.

**2.** Add bodily fluid.

**3.** Within seconds, VernaGel will react and turn up to 1.2 litres of bodily fluids into a semi-solid gel.

## Where can I use VernaGel?

VernaGel requires no special skills or training to use – making it ideal to use in almost every kind of healthcare situation where fluids are present.

- Urinals, bedpans, slipper pans, vomit bowls and washbowls of any material
- Sharps residues
- Spillages
- Liquid medicine disposal
- Colostomy bags
- Sanitary waste

## Where can VernaGel be disposed?

- Disposal units
- Clinical waste
- Sharps bins

Where this is not possible, empty into a toilet or slop hopper.

**DO NOT** tip 'gelled' substance into wash basins or sinks.

**DO NOT** eat.  
**DO NOT** leave patient unattended.

**Formats available**

**VernaGel sachets**  
100 sachets
