# Manage FOI and Subject access with CycFreedom3

Many Information Governance, Records Management and Data Protection professionals in the Emergency Services are facing the same problem... Increasing numbers of Subject Access, FOI and other information requests are becoming impossible to manage.

With the added complexity of Covid 19, social distancing, increased remote working it's become too time consuming to deal with. The required data and records needed to fulfil a request could be on paper and/or digital and spread across an organisation.

Can you manage and track all requests with deadlines and whilst remote working?

Too many FOI requests?

However, doing nothing isn't an option. The longer you leave it, the more the risks increase... The risk of non-compliance with statutory timeframes. The risk of ICO action. The risk of reputational and financial penalties. The risk of data breach and other UK GDPR data issues (eg retention/minimisation).

CycFreedom3 is the answer. Our Disclosure Management Software provides a solution which enables requests to be dealt with easily and quickly, dealing with all requests from receipt to disclosure and beyond. Fujitsu scanners make it easy to digitise paper records and upload directly against the appropriate case, whilst your data is hosted by UKCloud in UK Data Centres for UK Data Sovereignty.

Doing nothing is a time bomb!

ukcloud

CycFreedom 3 allows you to deal with 3 times as many requests with the same amount of resourcing you need now.
