

# Noggin for Continuity

## Business Continuity Solution Module

Manage every aspect of business continuity and crisis management in the world's leading platform for unified incident & risk management. Noggin Continuity provides you with all the tools you need to effectively assess business risks and impact, coordinate responses to disruptions, and manage incidents from the smallest outage to a major crisis.

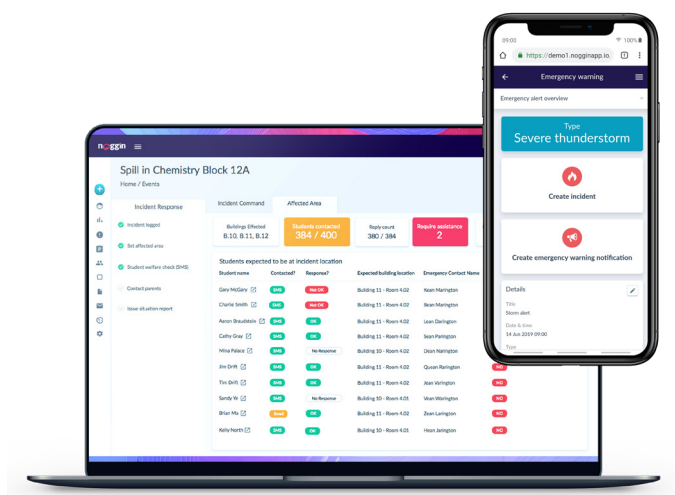

Use Noggin Business Continuity to:

- Define domains, critical business activities, assets and sites, and record inter-dependencies
- Assess the risk and impact of outages across your activities, assets and sites, and implement risk treatment plans and actions to mitigate risks, and reduce the likelihood or impact of incidents
- Assign and track business impact assessment and risk management activities for your organisational unit owners
- Set recovery targets for business activities and report on progress against those targets as incidents occur
- Visualise and report on the risk profile of your business and the impact on critical services
- Digitise business continuity, crisis and incident response plans, including strategies and considerations, roles and responsibilities, and pre-assigned checklists ready to deploy when incidents occur
- Activate crisis and incident management teams including structures, roles, capabilities required and on-call resources
- Record and manage incidents and response tasks, log and share updates, decisions, facts, and assumptions, and produce situation reports and briefings
- Initiate and track investigations, capture evidence and related actions
- Conduct exercises, post-incident reviews, and lessons learned.
- Visualise locations of incidents, risks, people, and assets using the fully integrated mapping features.
- Communicate alerts, notifications and updates via email, SMS, voice or the Noggin app
- Manage key details of staff, contractors, customers, suppliers, regulators, and external parties
- Display key information where it is needed using flexible dashboards, analytics, and reporting that caters for all your stakeholders.
- Automate and lead people through your procedures, with fully-configurable workflows.

## Key Features:

- Dashboards, forms and workflows for business impact assessments
- Registers of critical business activities, risks, insurances, roles and responsibilities
- COOP compliance - exercises and incidents, risk register, essential functions, mutual aid agreements and more
- Exercise management
- Incident reporting and management
- Comprehensive library of crisis and incident response plans and team structures, covering common disruptions, hazards and scenarios
- Dashboards and collaboration spaces for incident and crisis response teams providing key details, chat rooms, actions, feeds and timeline
- Investigations including ICAM and Five Why
- Hazard reporting and management
- Risk assessments, treatment, and reporting
