

D2NA

Our DNA Story

An introduction to D2NA

We provide comprehensive Cyber Security Assurance and Operations services for the Microsoft ecosystem.

Using our CyberAscend framework, we integrate the best Cyber Security practices from the NCSC into our services which ensures that our customers can confidently deploy, manage, and maintain their business-critical IT services securely.

Who are D2NA?

An introduction to D2NA

D2NA was established to help organisations use technology securely, responsibly and with confidence.

Over time, the business has evolved in line with the changing threat landscape and increasing regulatory demands faced by UK organisations.

Today, D2NA builds on more than two decades of experience across IT services and cyber security, combining deep technical capability with a strong governance and assurance mindset.

The organisation has deliberately transitioned from a traditional IT services model into a security-led partner, focused on advisory, assurance and operational security services aligned to the Microsoft ecosystem.

This evolution reflects both a change in ownership and leadership focus, and a clear commitment to supporting organisations as they scale, modernise and operate securely in increasingly complex environments.

Technical Leadership

D2NA is led by an experienced leadership team with deep exposure to enterprise and regulated environments.

Collectively, the leadership team brings decades of experience across cyber security, cloud platforms, managed services and governance-led delivery, having operated in and alongside complex organisations where security, resilience and accountability are critical.

This experience shapes how D2NA operates day-to-day - from service design and assurance models through to risk management, reporting and executive-level engagement. The team understands the realities of delivering secure services at scale, including the need for clear governance, measurable outcomes and strong operational discipline.

As a result, clients benefit from a partner that combines hands-on technical leadership with a mature, enterprise-grade approach to decision-making, delivery and long-term service evolution.

Security-First

Security underpins every engagement, from architecture and delivery through to ongoing assurance, governance and continuous improvement.

Proven Assurance

Independently accredited security operations and assurance services, providing confidence through auditable processes, governance and recognised industry standards.

Microsoft-Aligned

Deep expertise across Microsoft cloud and security technologies, delivering integrated protection, visibility and operational efficiency within the Microsoft ecosystem.

Enterprise Thinking

Experience working in complex, regulated environments ensures clear governance, accountable delivery and services designed to operate reliably at scale.

“D2NA exists to help organisations operate securely, confidently and at scale, with security and usability at the heart of what we do.”

Brian Cain

Managing Director, D2NA

Who we work with...

Trusted Across Security-Critical Sectors

We work with organisations where security failures aren't an option. With Microsoft Security at the core and strong sector expertise, D2NA helps clients manage risk, achieve compliance and build long-term operational resilience.

No two organisations face the same challenges when it comes to cyber security. Regulatory obligations, operational requirements, legacy technology, stakeholder expectations and threat profiles can vary significantly between sectors. That's why we take the time to understand the environments our clients operate in and deliver security services that are aligned to their specific risks and priorities.

Over the last two decades, D2NA has partnered with organisations across both public and private sectors, helping them strengthen cyber resilience, modernise their security capabilities and protect critical systems and data. Our security-first approach, combined with deep expertise across the Microsoft ecosystem, enables us to deliver practical, outcome-focused services that support organisations at every stage of their cyber security journey.

Sectors who trust us to deliver...

Finance

Fire & Rescue

Healthcare

Government

Manufacturing

Police

And many more...

Introducing...

CyberAscend

CyberAscend forms the DNA of our services, shaping how they are designed and delivered.

CyberAscend is the way we think, the way we work, and the foundation of every cyber security service we deliver. Embedded in our DNA, it ensures everything we do is focused on helping our clients build stronger, more resilient cyber security - not just once, but continuously.

The CyberAscend framework...

Because CyberAscend is embedded into our DNA, it is a key part to all our services. Every engagement follows this lifecycle, ensuring our clients receive consistent, repeatable and effective cyber security that grows with them over time.

Rather than treating cyber security as a one-off activity or a set of disconnected tools, CyberAscend embeds continuous improvement into the way an organisation thinks and operates. It ensures our clients are not only protected today but are constantly strengthening their security posture as their business, risks and technology evolve.

Our CyberAscend approach is built around five interconnected stages:

1

Initiate - We start by understanding our clients: their business, their goals, and what truly matters to them. This allows us to align cyber security with business outcomes from day one, not bolt it on as an afterthought.

2

Discover - We identify risks, vulnerabilities and gaps across people, processes and technology. This discovery phase gives our clients a clear, honest view of where they are and how to get to where they want / need to be.

3

Remediate - Following the Discover phase, we provide detailed reports that evidence the weaknesses, provide advice on how to strengthen, to close off the initial project we host a debrief meeting. This is to review the outcomes, allow time for questions, advise on next steps. This ensures organisations are empowered to close the gaps, remove vulnerabilities, plan, and most importantly increase their security posture.

4

Confirm - In this stage, we are keen to understand how remediation is progressing, an opportunity for organisations to ask questions and verify that the steps they have or are going to take fall in line with the recommendations made in the report and debrief meeting. D2NA can provide additional support if organisations require expertise or manpower.

5

Continue - Cyber security is never “done”. We know that organisations need to continuously review, adapt and improve to stay resilient. Threats, regulations and the organisation itself never stop changing.

How we help...

Security Assurance

Our Assurance services deliver industry leading security for organisations of all sizes and sectors. From CREST-accredited Pen Testing, Governance, Risk & Compliance management to Staff Training, you can be confident we have all your assurance needs covered.

Strong cyber security starts with clarity; understanding your risks, strengthening your defences, and having a partner who supports you at every step.

Aligned with your objectives and strategically planned by our team of experts using CyberAscend, putting you first.

Security Operations

Our Security Operations functions deliver industry-leading protection and support for organisations of all sizes, across every sector.

Designed to help businesses strengthen their security posture, reduce risk and respond effectively to evolving threats, our operations are structured around three clear functions that work together to provide comprehensive security coverage.

At D2NA, security isn't an afterthought, it's the foundation of everything we do. Our teams combine deep technical expertise, practical experience and a customer-first approach to deliver trusted advice, best-in-class service and proactive security outcomes. Acting as a seamless extension of your internal team, we help you build resilience, maintain compliance and protect what matters most to your organisation.

“We greatly appreciate D2NA’s proactive approach to our cyber security needs, consistently keeping us updated with the latest advancements.”

Shannon Fryer

Communications & IT Manager, EEUK

The Future...

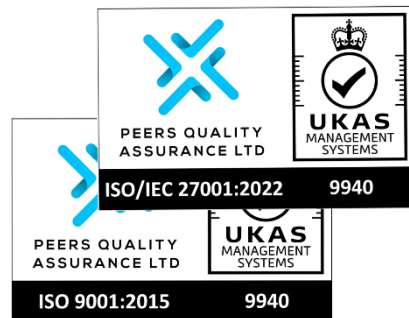

The future of D2NA is focused on driving meaningful security outcomes, not just delivering services.

We will continue to grow as a security-first partner that helps organisations operate with confidence, bringing together deep cyber expertise, the Microsoft ecosystem, and our structured CyberAscend framework to provide clarity, resilience, and continual improvement.

Customers can expect a proactive, long-term partnership: one that evolves with the threat landscape, supports modernisation safely, and provides clear governance, measurable progress, and people who genuinely understand their risks and their organisation.

Our Accreditations...

Our customers benefit from our industry expertise, accreditations and partnerships.
