

Turn public data into an operational advantage in real-time

Modern defence organisations face a fundamental challenge: information overload obstructs critical decision-making.

30,000 human analysts working 24/7 could process 1% of the public data Dataminr ingests each day.

That's why defence organisations across the globe trust First Alert to surface threats, incidents, and mission-relevant events the moment they emerge to quickly and confidently safeguard assets, critical infrastructure, and force protection.

Real-time Information Critical for Defence Initiatives

Attain Information Parity: Stay inside the adversary's OODA loop with first-to-know situational awareness. Trusted by joint operations centers and ministries of defence to close information gaps and enable early warning, tipping and cueing, and faster response.

Mitigate Operational Risk: Operational commands, including joint operations centers and special forces, monitor fast-moving developments across both domestic incidents and deployed operations across Africa, the Middle East, and Eastern Europe.

Enable Civil-Military Response: Military and civilian authorities assess and respond to humanitarian crises, natural disasters, and civil instability in countries at risk.

Use AI across Public Data with the necessary:

Speed

Real-time Event Discovery
Spot threats as they emerge—not after

Scope Broad Coverage

Avoid missed events with 1M+ sources across multiple formats.

Relevance Actionable Alerts

Precise alerts tailored to your mission scope.

Trusted by NATO
and national
ministries
across Europe

Uncover events others miss with a real-time, AI-native platform

Dataminr's AI platform is a force multiplier – rapidly detecting events relevant to your operational priorities 24/7 by analyzing audio, images, video, and text in 150+ languages from 1+ million public data sources across social media, public websites, sensors, live feeds, and 3,000+ deep/dark web sources.

Stay ahead of the status quo

Enhance Situational Awareness

Identify and monitor multi-domain threats and events across land, sea, air, cyber, and space.

Inform and Accelerate the Decision Loop

Compress the OODA loop with real-time information on events that impact force protection, regional stability, mission continuity, and more.

Integrate Seamlessly

API-ready and compatible with the tools you already leverage, from HQ to frontline units.

Data ethics, without compromise:

Dataminr leverages publicly available, non-intrusive data sources

First Alert is secure, scalable, and compliant: NIST 800-171, SOC2 Type II, ISO-27001, ISO-27701, and UK Cyber Essentials Plus certified.

Our advantage doesn't depend on private data or surveillance. We ingest only public information at an unprecedented scale and speed, aligning with NIST, ISO, and UK cyber standards.
