COMMITMENT

...rior service on after-sales and technical support.
Customers for life ...

People are in fact the most important factor in a company...
The working group that supports VLB has been set up to merge highly specialised professionals. All of them with proven experience in the field of machine tools, in particular in pipe and tube bending and sheet processing. Dedication is the backbone of the VLB brand. The joint mindset of all team members is crystal clear; the development and production of innovative and highly effective solutions for pipe and sheet processing.
We want to serve the market not only with the highest quality equipment and technology, but also with a superior

STATE-OF-THE-ART-MANUFACTURING

We strive not only for excellence in human resources, but also in the ultra-modern production facilities that cover an area of more than 10,000 m2.
The machinery consists entirely of CNC equipment from the world's leading manufacturers. To improve efficiency, these machines are strategically placed in an exclusive production hall with a surface area of 3,000 m2.
The programming is centralised in a specialised CAM department from which production is monitored by dozens of specialised technicians.

TOP LEVEL ENGINEERING

Although the name VLB is a recent brand in the market, our team has dozens of years of accumulated experience in metalworking machinery, especially in tube and plate forming.
The search for excellence is in the company DNA. We have scouted and incorporated experienced professionals, in all aspects of the process: research and development, the manufacturing process, software development, automation and so on.
In addition to the constant dialogue with our customers, we actively cooperate with universities and scientific institutes in order to develop new solutions.
This mentality enables us to always stay one step ahead in responding to current needs, and especially to be prepared for the challenges within the current industrial environment.

TUBE BENDERS - EB-CNC SERIES

The **EB-CNC** series electric VLB bending machines are equipped with the latest **Electric Motion** technology. With **up to 9 fully electric drive axis**, pipes with a diameter of **6 to 150 mm** can be bent. Equipped with a **Booster system**, it is possible to achieve radii up to 1D with reduced marks in the inner bend. The drives on all axes are optimised to **reduce energy consumption** and **increase speed**, making these machines ideal for **high volume production batches** that require **high consistency**. Weld detectors, punching and cutting systems or integration into production systems with loading and unloading facilities are options available for the EB series. VLB 3D software prepares these machines for **INDUSTRY 4.0**

EB43CNC

Compact design

Right or Left turn bending

The EB models full electric bending machine can be changed manually to the **right and left** depending on the customer's need or a specific order. The **vertical and horizontal movements** contribute to the wide range of motion of the bending head. **This feature is especially important to facilitate integration with automatic loading and unloading systems.**

VLB 3D SOFTWARE

VLB bending machines are at the **forefront of automation and control**, the VLB 3D software is developed by an experienced IT team. This department is in direct contact with the technical department and end users. For example, we continuously implement improvements and innovations for both bending performance and ease of use.

Programming is very **intuitive** and **file import** and export can be performed **directly with all major CAD design software.**

Main features of the EB series

- **100% electric drive** of all 9 axes.
- Bending of **multiple fixed** and **variable radii** in the same cycle.
- **Quick change of bending tool**, without having to readjust.
- **High production speed** and **low power consumption**.
- Axis movements controlled by servo motors with **absolute encoder** feedback.
- Simplified **synchronisation** and **optimisation** of bending cycles.
- **Compact and ergonomic design** guarantees operating comfort.
- **Low maintenance costs** with preventive intervention warnings.
- Sensors that monitor the elastic behaviour of the material, compensate for the bending cycle and provide more **precision** and **less material waste**.
- **Bend left or right**, with shorter change time.
- Powerful and intuitive **VLB 3D software** with anti-collision simulation.
- Easily program or **import files from the cloud or from the network**.

EB83CNC

| More information

Loading and unloading systems

Aware of the needs of modern industry, the new bending machines have been developed with a clear goal, **productivity!** They are completely designed and **prepared for the highest production level (24/7)**. Mechanically, they only contain **high-quality** and **low-maintenance** components. In terms of **software** and **hardware**, they can effortlessly **integrate with automatic loading and unloading systems** such as **tube storages, robots** or **manipulators**.

Tube cutting system

Production optimisation is an increasingly important topic. In order to save time, material and electricity consumption and to increase the productivity of our machines, we have developed an **effective servo-controlled cutting system, without material deformation**.

It is a cutting system with a knife integrated in the bending head, which allows **cutting in a continuous automatic bending cycle**. This prevents material waste and post-processing is often not necessary.

Evolutionary design

Our bending machines are the result of **decades of experience** in the world of bending. The user experience of thousands of customers worldwide have resulted in unique **application-oriented solutions** for these machines.

We facilitate human-machine "communication", using visual status indicators and warning messages. We improve **operating comfort**, preventative maintenance, corrective actions and increase the safety of the operator and equipment.

The characteristics of VLB's fully electric bending machines make these machines ideal for industries that prefer speed, efficiency, high productivity and repeatability. Sectors such as the **automotive industry, furniture industry, aerospace, HVAC** or companies that require rapid tool changes.

| Technical features | EB43CNC | EB53CNC | EB63CNC | EB83CNC | EB100CNC | EB130CNC | EB150CNC |
|-----------------------------|------------|------------|------------|------------|------------|------------|------------|

| Z axis precision | +/- 0.05° | +/- 0.05° | +/- 0.05° | +/- 0.05° | +/- 0.05° | +/- 0.05° | +/- 0.05° |
| Maximum bending radius | 230mm | 230mm | 290mm | 290mm | 370mm | 400mm | 400mm |

BENDING MACHINES - EB-RH CNC SERIES

VLB's fully electric **EB-RH series bending machines, with rotating heads**, contain the most advanced Electric Motion technology on the market with **11 fully electric drive axis**. The **bending head moves 360° on a radial axis** and on **horizontal and vertical axes**. This system offers complete freedom of movement and allows the production of **very complex parts** in an automatic bending cycle.

This range of machines is capable of bending pipes and profiles from **6 to 53 mm** with even radii up to 1D with minimal marking when equipped with the booster system.

The cycle speed and low energy consumption make these machines ideal for production with a **high volume** and **high consistency**. Because the level of automation is so advanced, they are easy to integrate into automatic production lines or to combine with automatic loading and unloading elements.

INDUSTRY 4.0 machines, thanks to the advanced **VLB 3D software**.

Fixed and variable multi-radius
Compact design

Freedom of movement ...

The EB-RH series bending head drive system provides **complete freedom of movement**. The 360° rotation, combined with the vertical and horizontal axes, allows a quick positioning for the production of **very complex bending work**.

The solution chosen by VLB for the rotation is extremely compact and maintenance-free. It is **structurally robust yet lightweight and with a low inertia**, allowing for **high bending speeds and rapid tool selection adjustments**. This unique **design dramatically reduces the cycle time of complex bending workpieces**.

VLB 3D SOFTWARE

VLB bending machines are at the **forefront of automation and control**; the VLB 3D software is developed by an experienced IT team.

This department is in direct contact with the technical department and end users. For example, we continuously implement improvements and innovations for both bending performance and ease of use.

Programming is very **intuitive** and **file import and export** can be performed **directly with all major CAD design software**.

Main features of the EB-RH series

- **100% electric drive of all 11 axes.**
- Bending head with **360° radial axis** and **horizontal and vertical linear axis**.
- Bending **clockwise and counter clockwise in automatic cycle**.
- Bending of **multiple fixed** and **variable radii** in the same cycle.
- **Quick tool change**, without having to readjust.
- **High working speed** and **low power consumption**.
- Axis movements controlled by servo motors with **absolute encoder feedback**.
- **Simplified synchronisation** and **optimisation** of bending cycles.
- Compact and ergonomic design for optimal operating comfort and maintenance.
- Sensors that compensate for **material bending back** and provide greater precision and less waste during the bending cycle.
- Powerful and intuitive **VLB 3D software** with **anti-collision simulation**.
- **Easily program** or **import files from the cloud or from the network**.

Easy integration

The 360° rotation system, together with the vertical and horizontal movements, contributes to the **wide range of movement of the bending head** and, if necessary, deflecting the head so that the positioning carriage advances beyond its normal limits.

This feature is particularly important to facilitate integration with automatic loading and unloading systems.

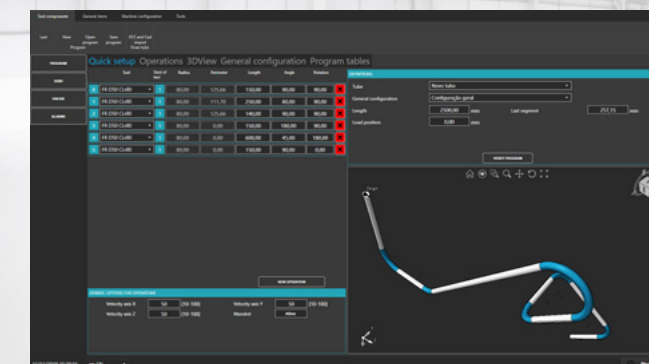

The characteristics of VLB's fully electric bending machines make these machines ideal for industries that prefer **speed, efficiency, high productivity** and **repeatability**. Sectors such as the **automotive industry, furniture industry, aerospace, HVAC** or companies that require **rapid tool changes**.

| Technical features | EB43RH-CNC | EB53RH-CNC |

| Maximum capacity (45kg/mm2) | Ø43x2mm | Ø53x2mm |
| Controlled axles | 10 | 10 |
| X axis precision | +/- 0.05mm | +/- 0.05mm |
| Y axis precision | +/- 0.05° | +/- 0.05° |
| Z axis precision | +/- 0.05° | +/- 0.05° |
| Maximum bending radius | 250mm | 275mm |

VLB 3D SOFTWARE

VLB bending machines are at the forefront of automation and control; the VLB 3D software is developed by an experienced IT team. This department is in direct contact with the technical department and end users. For example, we continuously implement improvements and innovations for both bending performance and ease of use.

Programming is very intuitive and file import and export can be performed directly with all major CAD design software.

VLB 3D Software

- Direct 3D graphics programming in XYZ, LRA and import of CAD files, with problem analysis and correction suggestions.
- Collision simulation.
- Cycle time simulation.
- Automatic correction of elasticity and calibration of the bending workpiece with calculation of the actual required length.
- Offline installation and connectivity with peripherals.
- Connectivity with measuring arms in combination with automatic correction.
- Feasibility analysis, modification and export of the file for use in the design department.
- Remote online help

The VLB 3D software is developed in-house by a dedicated IT department, which is in direct contact with the technical service department and all users. The data collected helps us to evolve and find answers to constant challenges. Each new update can be installed on existing machines.

INDUSTRY 4.0

All actions are monitored in real time; production time, tool change time, energy consumption etc. This information (or other information that the customer means is relevant) is automatically collected and stored for analysis and optimisation by the operator, a specific (design) department or ERP software.

With the resulting information, the customer can, for example, optimise material management, planned maintenance work, budgeting, feasibility checks or the purchase of raw materials.

The EB series is at the forefront of automation and control. The VLB 3D software is developed by an experienced IT team that works daily on improvements and innovations in terms of machine performance as well as ease of use.

- Intel Core i5-6500 quad core 3.2 Ghz
- 8 Gb of DDR4 RAM
- Integrated graphics card Intel HD graphics HD510 / 530
- 64 GB Msata HD
- 2 Ethernet ports + RS-232 serial port + 8 USB ports
- Windows® 10 IOT Enterprise 2016 PC system

With the capacity to store over 1,000,000 programs of up to 30 bending programs each.

BENDING MACHINES - ECO-NC SERIES

The bending machines of the **ECO-NC** series are **easy to operate, robustly constructed** and **achieve excellent bending results**.

Entering a new bending program is very intuitive with the help of an **industrial touch controller** and the accurate and user-friendly VLB 2D software. **The NC program precisely controls the bend angle (Y-axis) and rotation (Z-axis)**. The distance between the bends (X-axis) is configured using easily adjustable and very precise mechanical stops.

The essential movements - **bending angle** and **rotation of the pipe** - are **fully electric to ensure exact repeatability**. The supporting bending movements are driven by a **powerful hydraulic group**. All movements are electronically controlled. These properties make these machines very **versatile and suitable for high-quality bending work**, in small and medium size series.

ECO92NC2
Semi-automatic bending machine
Fixed radius
Compact design

More information

Low profile positioning cart

Powerful hydraulic system

Most important features

- **Simple, durable** and with **excellent bending results**.
- **Very intuitive programming** of bending angle and rotation with industrial touch controller.
- Drive of **bending** and **rotation** of the tube **electrically**.
- **Hydraulic drive** auxiliary movements.
- **Quick change of bending tool**, with easy adjustment possibility.
- **Revolutionary clamping system**, with a **compact bending head**.
- **Powerful** and **low maintenance bending machine** with reduced bending head increases the possibilities of **complex bending work**.
- **Integrated tool cabinet** with interior lighting.
- **Compact and ergonomic design**, takes up little production space and **improves operating** and **maintenance comfort**.

Evolutionary design

Our bending machines are the result of **decades of experience in the world of bending**. The user experience of thousands of customers worldwide have resulted in unique application-oriented solutions for these machines. **We facilitate human-machine "communication"**, using visual status indicators and warning messages.

ECO92NC1
Semi-automatic bending machine
Fixed radius
Compact design

More information

The ECO series of semi-automatic fixed radius bending machines are very versatile, powerful and easy to program and operate. They are intended for sectors that choose versatility and bending quality in terms of speed and productivity. Sectors such as **urban furniture, agriculture, prototyping, chemical industry** and **ship repair**.

| Technical features | ECO63NC | ECO92NC |
|------------------------------|-----------|-----------|
| Maximum capacity (45kg/mm2) | Ø63x3mm | Ø92x4mm |
| Controlled axles (NC1 - NC2) | 1 - 2 | 1 - 2 |
| Y axis precision | +/- 0.1° | +/- 0.1° |
| Z axis precision- NC2 | +/- 0.05° | +/- 0.05° |
| Maximum bending radius | 180mm | 255mm |
| Standard working length | 3000mm | 3000mm |

BENDING MACHINES - ML SERIES

The VLB mandrel bending machines are developed and produced to the highest standards and equipped with the highest quality components. They are safe and easy to operate and easy to program with a touchscreen. The NC controller makes it possible to manually program and bend up to 10 bends. These machines are easy to move because they are standard equipped with transport wheels. The ML bending machine can also be moved with a crane using lifting eyes.

ML76NC
100% Electric bending machine
Fixed radius without mandrel
Movable with built-in wheels
Compact design

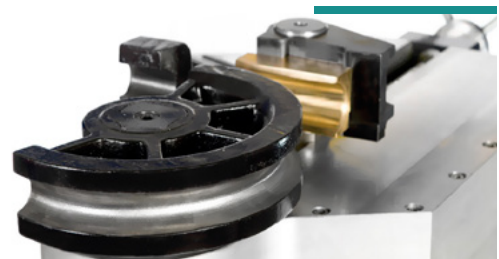

Touch screen

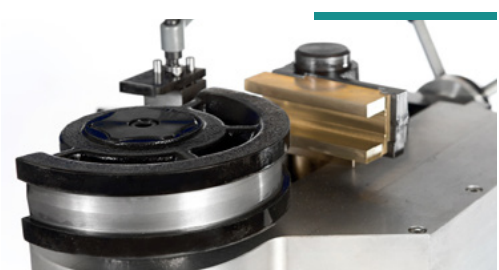

More information

Rapid tool change

Fit for bending various profiles

Main features of the ML series

- Efficient bending of **round, rectangular, oval pipes**, etc.
- **100% electric** drive of the bending axis.
- High resolution **touch screen** and **easy to program**.
- **10 consecutive turns per program**, with a total of 10 programs.
- **Manual fastening** of the tube and **quick tool change**.
- **Variable bending speed**, with **spring-back correction**.
- **Overload protection** at too high a speed.

TECHNICAL FEASIBILITY STUDIES

We put our knowledge at the service of our customers. Today's industry is facing unique requests and needs on a daily basis for which conventional techniques are not always a solution. Whether it is a new product, shape, material or the need to optimise an existing process. At VLB we make all our knowledge and expertise available to our clients. After determining the specific needs together with the client, our R&D department uses all its know-how to propose the right solution that meets the requirements.

TOOL ENGINEERING AND PRODUCTION

Expect a good machine the secret to good quality material deformation (e.g. bending, stamping and folding) and constant results is certainly the tooling. Its design, the quality of the used materials, the machining and the applied heat treatment. The vast experience of our engineering department, the quality of our production resources and the professionalism of the programmers and operators, ensure the highest quality of the tooling manufactured by VLB.

SPARE PARTS AND CONSUMABLES

All our machines are fully developed, produced and assembled in our factories in Famalicão in Portugal. The manufacturing process has been fully digitised and controlled to guarantee and certify the traceability of all machine components. Our warehouse, with an area of 800m2, has permanent stock of all components used in the machines. For example, we are able to ship an order within 24 hours after receipt of an order that has been identified by coding. We work daily with the best international transport companies to achieve one.

CUSTOMER TRAINING

Customer oriented training has a positive impact that cannot be underestimated. VLB training plans are designed in such way that the learning time is as short and efficient as possible. Let the client develop autonomy and make the most out of the equipment. Knowledge transfer is meant to increase efficiency, contribute to profitability, reduce downtime and extend the life of tools and equipment. Training can be carried out at the VLB or at the client.
