

# ZONA™ 3 HVM PLANTERS FROM LOGIC PROTECT

Logic Protect Zona™ 3 is a surface mounted HVM planter that can be locked into position by a trained technician in less than one minute.

The HVM system consists of inline linear planter HVM modules, which can be installed on any level surface, without the need for any foundations.

The HVM system locks into place quickly, thanks to Logic Protect's patented rapid deploy locking system. The versatile temporary HVM system can also be reconfigured easily for redeployment in multiple locations, providing excellent flexibility for a wide range of security needs.

Patent pending (GB 2206284.8) with a registered design (UK00003760470), the decorative Logic Protect Zona™ 3 planters are available in a variety of materials, including powder coated, stainless steel and weathered steel. The HVM planters can also be customised for branding or advertising.
