

THE CORE FROM UNAFOR

The Core is a semi-permanent HVM system designed for rapid deployment by a single trained technician once the shallow mount foundations are in place.

With structural foundation depths starting from 200mm, The Core is a flexible solution for almost any environment. Paving or surface finishes between 50mm and 150mm deep can be placed around the sockets, enabling the installation to blend into its surroundings. The sockets can be supplied with cover plates, ensuring that the system is almost invisible when not in use.

A lightweight HVM system, The Core can be installed or removed by hand by one person without any lifting equipment. It features an innovative click and lock mounted installation method which enables posts to be inserted into the foundation sockets and locked into place with a firm and stable fit.

The certified HVM system can then be concealed with a choice of bollards, street furniture or planters, including seating, bicycle racks and branded or unbranded alfresco dining enclosures.

Technical Specification

MATERIAL
Galvanized steel

HEIGHT ABOVE GROUND
500 - 600mm

DIAMETER
125mm

DEPTH OF FOUNDATION
200mm

SECURITY RATING
IWA 14-1: 2013
V/1500 (M1)48/90:00
V/3500 (N1)/48/90:2.8
