

# QAB SYSTEMS

# OVERVIEW

This patented system was developed by WCC Group in 2013 to allow our teams to have a safe means of access while working on security fencing.

Our system has eliminated the need for MEWPS or scaffolding which is especially useful in remote or hard to access areas.

Using QAB Systems allows instant access with a minimum amount of equipment. All products are manufactured and tested in the UK. Milled from solid aluminium. Our products are designed, manufactured and finished to the highest standard.

SR2 and Armourweave brackets have been developed in conjunction with European manufacturers giving a broad range of choice for clients where security assessments have identified the requirement for differing meshes.

Our in-house design team work in a collaborative effort with our maintenance team to develop and refine our existing products and systems.

If you have security fencing, access or maintenance related-issues that are not currently catered towards, please get in touch, we will do everything we can to help.

## PRODUCT RANGE

Safe, compliant and massively reducing access costs. The range has been developed to provide installers with a versatile range of access and lifting methods. Without which gives rise to unsafe practices, whereby unrated equipment may be used that is not compatible with current regulations.

## LIFTING BRACKET

A compliant lifting accessory to make your lifting plan robust. SWL rated to 500Kg. Ideal for lifting fence panels into position. The lifting bracket can be utilised in pairs to tension fence panels to posts. LOLER compliant.

## FALL RESTRAINT BRACKET

When used with a positional work harness and adjustable lanyard system to provide fall protection and safe access when vertical bolting or accessing fence top defences. When used with the multi purpose bracket this removes the need for ladders and provides a comfortable work position whilst installing and carrying out repairs to security fences. Working at high regulations compliant.

## LADDERS SUPPORT BRACKETS

Attached to the fence, giving a solid connection point for QAB access ladders. May also be inverted to provide a manual handling solution. Also available as a 90° bracket to connect through fence electrification to provide the ability to attach an 18 rung ladder, giving access to the highest points found on fences.

## MULTI PURPOSE BRACKET

Versatile kit that can be used as a step in conjunction with a fall restraint bracket to create an access method to bolt panels to posts without the need for powered access or unstable ladders. When inverted it becomes a lifting handle to manoeuvre brackets using manual handling techniques. The bracket can also be used to connect alloy work towers to fences preventing the need for outriggers, expensive powered access and making maintenance on fence top defences safe and cost effective.
