

The Challenge

SECURITY WITHOUT THE BOTTLENECK

Public venues face a common dilemma: how to move thousands of people safely into secure areas while ensuring dangerous items don't slip through.

- **Manual bag checks** are slow, inconsistent and resource heavy.
- **Traditional X-ray systems** require trained operators to interpret complex images, causing queues.
- **Crowd build-up** at entry points is a risk in itself.

Customer Feedback

"Queues aren't just inconvenient; they're unsafe. The real target is often the crowd before the checkpoint."

THE SOLUTION

LV Stream by LINEV Systems UK

Developed to meet the needs of stadiums, arenas, museums, and attractions, LV Stream reimagines how bag screening works.

- **AI-powered, dual-view X-ray** with instant analysis.
- **1,400 bags per hour** – aligned with natural walking pace.
- **Operator-free efficiency** – staff only act when an anomaly is flagged.
- **Compact, flexible design** – integrates with walkthrough detectors, access gates, and command systems.

RESULT

Visitors move through seamlessly while security teams focus on the wider environment and customer satisfaction.

ABOUT LINEV SYSTEMS

LINEV Systems® is a global brand with over 30 years of expertise in X-ray imaging and security technologies.

Supported by more than 1,500 professionals and four decades of industry leadership, we engineer solutions that protect lives, improve safety, and advance vital sectors. With development centers, manufacturing sites, and service hubs in the USA, UK, and beyond, we combine local responsiveness with global capability.

LINEV Systems UK is an X-ray security solutions provider based in and serving its products throughout the United Kingdom.

REAL-WORLD TRIALS & RESULTS

The O2 Arena, London

Over six months, LV Stream screened **hundreds of thousands of bags** during live events.

- Kept queues moving and reduced manual searches.
- Freed staff for other security duties.
- Visitors reported a smoother entry experience.

Customer Feedback

"X-ray is an important part of a layered security solution in the events world. We have always used X-ray technology at the O2 Arena and have found LINEV Systems to be an excellent team to work with. Their support and depth of knowledge as an OEM is second to none."

Stefan Thompson
Security Operations Manager, The O2

The O2 Arena, London

Natural History Museum & Sea Life Centre London

Trials showed benefits beyond security:

- **No queues outside** – reducing vulnerability at entry points.
- Guests entered more quickly and spent more time inside.
- **Direct commercial impact:** Increased spend on food, beverage, and merchandise.

LOOKING AHEAD

The Future of Venue Security

The future of screening is automated, intelligent, and near-invisible to visitors.

- Guests should feel safe without enduring airport-style checks.
- Operators gain reliability, cost control, and scalability.
- LV Stream sets a new standard across public venues of all sizes.
- Savings for the venue as security personnel can be used in other areas or reduced.

Customer Feedback

"Every scan is a step towards a secure future."

WHY IT MATTERS FOR SECURITY MANAGERS

LV Stream delivers a triple benefit for modern venues.

- ▶ **OPERATIONAL EFFICIENCY**
Automated, consistent, scalable screening.
- ▶ **SAFETY FIRST**
Eliminates crowding outside checkpoints.
- ▶ **COMMERCIAL ADVANTAGE**
Faster entry = more guest time inside = higher revenue.
- ▶ **RAPID ROI**
Staffing efficiencies enable payback in **under 12 months**.
