Your Backups Are Under Attack Stop Hiding FROM RANSOMWARE AND START HUNTING IT

PETE NOURSE CMO | CRO

Asigra Corporate Overview

- 20+ years of innovation
- Multi-year award-winning platform
- Focus on secure data protection, cloud backup and "Cyber-Safe Recovery"
- 250+ MSP Partners Worldwide
- 1,000,000 installations worldwide
- North American HQ (Toronto) delivering global solutions

I know that my client's data is safe and sound using the Asigra technology, and I can restore anything from anywhere with zero hassle. The agentless technology works flawlessly.

A Unique Security Architecture

Agentless Backup

Evolution of Backup Infiltration

Sleeper (Trojan Horse) Attacks

Deeply Embedded Malware

Backup Subversion

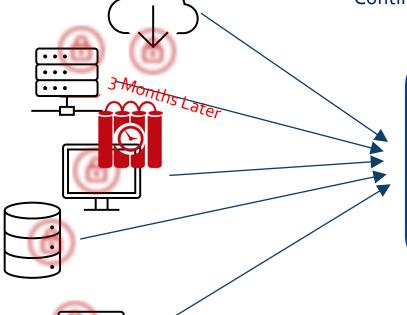

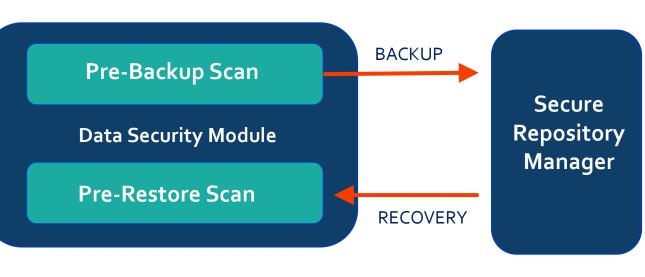

Integrated AntiRansomware

Bidirectional Antimalware Scanning

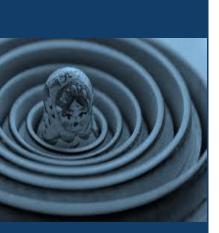

- AI and ML behavioral heuristic detection
- Detect and block attacks at pre-execution with high accuracy
- Advanced Anti-Exploit
- WW in-the-wild sensors
 - Continuously identify zero-day attacks

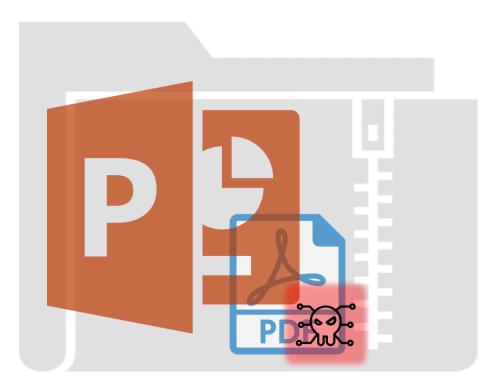

Embedded Attacks

- Weaponizing Documents
- Can't Scan, What You Can't see
- Deeply embedding executable Content
 - Macros
 - Links
 - Code

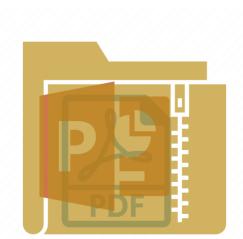

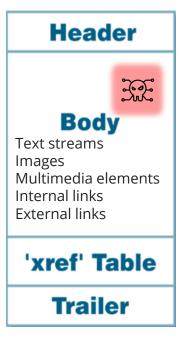

CDR Breaking It Down

Asigra CDR

- Scan File System backup sets for potentially malicious or unauthorized content embedded within files (macros, scripts, etc.)
- Pre-defined policies (filter, block and remove)
- Breaks down each archive/file into its smallest components
- Scans each component to identify all objects
- Potentially dangerous objects are acted upon based on policy

Backup Subversion

Covid was Good for the Bad Guys

Remote work increased the threat landscape in 2021*

- 59% increase in access to critical business systems
- o 55% increase in credential theft
 - 90% of companies hit by phishing attacks
 - 29% hit by credential stuffing

Using The Backup System

Against Itself

- Most backup systems have low levels of security making credential theft simple
- Once credentials are stolen, the attacker appears legitimate
- Attacker can modify backup settings to delete all data
- Synchronize backup deletion with encryption detonation

Asigra Deep MFA

Advanced and Integrated Multifactor Authentication

- Passwordless authentication
 - Biometrics
- Multi-Person MFA
 - Multiple people authenticate
 - Can be inside or outside your company
- Task Based Authentication
 - Emptying the DS-System Trash Folder
 - On-demand backup and restore protected
 - Backup deletions (set level and item level) protected
 - Reassign, edit or deletion of retention rules and schedules protected
- Supports Secret Double Octopus
- MS Authenticator & Google Authenticator (Q1)

Unparalleled Security Flow

Within the Data Security Module

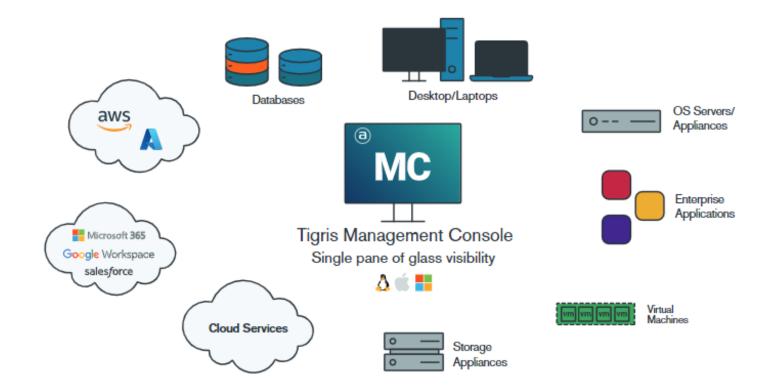

All Data Scanned In-Line

End to End Data Protection

One of the biggest benefits for Asigra is its agentless nature allowing us to protect environments without having to worry about deploying lots of different agents. This is especially beneficial for protecting cloud resources such as AWS, Azure and Google hosted environments." Oliver K. MSP servicing SMB-enterprise customers
