

# WHY CHOOSE US?

## WHAT OUR CLIENTS SAY

"We work with John Saysell and team on a regular basis, they provide operational maintenance training to our technicians. They are easy to work with and support any initiatives that we have."

Thames Water

"Very organised and professional training with all equipment supplied."

Bentley Motors

"Our customer experience was really great with MCP all very organised and self-sufficient. The trainers all received great feedback from our staff, on their knowledge of the subjects and their experience to bring this to life."

- Controlling Hazards for Managers
- Technical Assessment Centres
- Engineer Training, Coaching and Assessing Skills

JOHN SAYSELL

MCP Technical Training Director

The most valuable asset in your business is your people. If they are maintenance technicians and operator maintainers their value is even greater. The talent pool of maintenance technicians in the UK has been diminishing for several years. Add in the number of eastern European technicians going home after Brexit, companies struggling with the apprentice levy and accelerated retirements after Covid, and the situation has become critical.

Our job is to ensure your maintenance teams have the skillset required to be safe, competent, motivated and bring additional value to your organisation.

MCP has been working with businesses for nearly 50 years, helping to improve performance.

This year we have trained more than 500 delegates on technical public courses.

We would welcome a conversation with you to discuss your technical training requirements and how MCP can support you.

Thank you for taking the time to read our introduction.
