

HONEYWELL FORGE PERFORMANCE+ FOR AEROSPACE

Honeywell Forge Performance+ is a comprehensive SaaS offering of cloud-based productivity applications – Worker Intelligence, Asset Management and Operations Management – which is custom-configured for an organization based on their unique functional needs.

Performance+ aggregates data and performs modeling across multiple business domains to provide actionable insights, alerts and automated work orders and task management via a user-based access controls model to help boost data protection and optimal user function across IT/OT domains.

FEATURES

Asset Performance

- Health and integrity management
- Predictive maintenance
- Reliability and performance management

Operations Excellence

- Enterprise performance monitoring
- Planning and benchmarking
- Process improvement

Workforce Intelligence

- Shorted loop between office and field
- Standardized communication and tasking
- Effectiveness and recommendation

BENEFITS AND OUTCOMES

MANAGE COMPLEXITY IN PROCUREMENT AND CATEGORY MANAGEMENT WHILE SIMPLIFYING DIGITAL SERVICES PORTFOLIO.

Reduce asset downtime, scale monitoring/servicing and lower the total effort to maintain equipment.

Meet evolving cybersecurity needs and protect critical assets.

Increase worker engagement and awareness to enhance overall performance and safety.

Lower cost of ownership (OpEx, not CapEx).

Commercially available and proven, with FedRAMP certification in development.

A SINGLE OFFERING THAT COMBINES VALUABLE INDUSTRIAL FUNCTIONS RELATED TO ASSET, WORKER AND SITE.

Monitor status and availability of equipment from anywhere with predictive and prescriptive analytics. Integrate with existing infrastructure to digitalize legacy assets. Move from scheduled to usage-based maintenance processes.

Built-in cloud-based platform security with data and security policies owned by the customer. Modules for advanced OT cybersecurity are available.

Coordinated operations via shared data and cross-site visibility. Virtually separates functions via access control based on the user's role so each user receives the data and insights most relevant/critical to their role. Easily manage users and access, and drive user adoption with persona-based dashboards that have a common look and feel.

Extensible, model-based design with no-code configuration and extension, seamlessly stay up to date with cloud-based updates. Experience scalable architecture as assets/sites evolve.

Proven in industrial, manufacturing and supply chain operations globally. Leveraging our deep aerospace domain expertise to offer FedRAMP-certified environment anticipated in late 2024.
