

Connect your Mobile Workforce with a paperless, integrated, digital experience...

ConnectManager allows you to create and schedule Jobs to mobile operatives with the Smart Scheduler. Easily track Customers, Sites, Assets, Jobs, Projects, Vehicles and Operatives. View Job and Operative locations on the real-time Map display, and on the live Dashboard.

ConnectMobile is the Mobile App part of the solution. This displays essential Job information to mobile operatives, who can update the job status, attach photos of the job and assets, record their time onsite, and raise new Jobs if necessary.

Open APIs allow us to integrate the product with your other systems, which include CivicaCX, OmniLedger, SAP ByDesign, and other compatible ERP and CRM solutions that your back-office functions use or plan to use.

Use Cases include Facility Management teams, Property Maintenance teams, Housing Associations, Retailers, Air Conditioning engineers, Airport Trolley service & repair teams, Mining Truck maintenance teams, Business Telephone installation teams and many other specialist providers who need to inspect, service, maintain, and repair their customer's physical assets.

Manage Customer, Site, Job, and Asset Information from one system...

Customers

Create and track Customer information in ConnectManager. Easily add all customer sites.

Assets

Create physical Assets such as Gas Boilers, Air Conditioning Units, Electrical Panels, Plant Equipment and other mobile or static machinery that need routing inspection, maintenance, service and ad-hoc repair.

Jobs

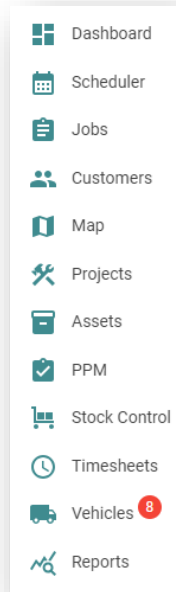

Create Jobs against Sites and their associated Assets. Easily schedule these in the Smart Scheduler to Operatives with the right skills and availability.

Timesheet

ConnectMobile records timestamped 'events' such as 'start travelling', 'arrived at site', 'started job', 'job completed'. These timestamps effectively form the Operatives Timesheet. Adjustments can be made if necessary.

Vehicles

Add in your Fleet of Vans or Cars, and automatically track their MoT and service dates too. Enable 'daily checks' to encourage operatives to check their vehicles at the beginning of each day or shift.
