By tapping into data from our product suite, Pronestor Insights gives you a 360-degree picture of your organization's meeting activities. By combining data and feedback from the users, you can get specific action-points to enhance facility availability, which is crucial for employee work processes.

Get insights into behavior patterns

It is essential for Pronestor that our solutions support you in your everyday work. Company facilities should always enable you in your work. If this is not the case, it will become visible with Pronestor Insights, where you can see behavioral patterns based on facility usage.

We can provide the insights needed for you to optimize your facilities.

Compare your meeting rooms

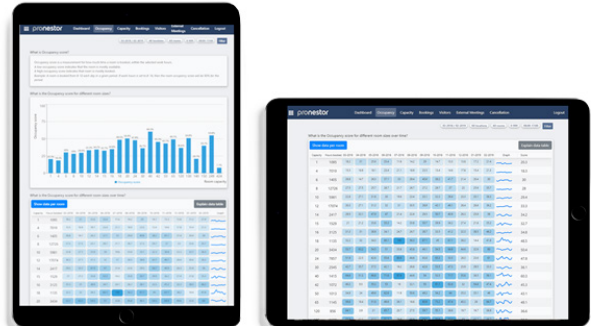

Compare and analyze meeting room usage by their characteristics. By this you will understand how you best utilize your facilities.

pronestor insights

Data serving two perspectives

Pronestor Insights serves two perspectives; for your management with accurate action points that will ensure that your existing facilities are used to their maximum. And for the main users of your facilities that will gain knowledge of how to optimize their behaviour and processes.

Reduce no-shows

Pronestor Insights provides you with facts about three types of meetings: Confirmed meetings, no-shows, and spontaneous meetings.

See if you need additional rooms or if you need to optimize the usage of existing facilities. Deliver data to inspire your organization to reduce the number of no-shows and create possibility for spontaneous meeting. Further, you can track down recurring no-show bookings.
