

12V PSU for NVR

Power supply unit for the device operation on a low-voltage power source

(*) Uninterrupted recording in a power outage

12V PSU for NVR is an electronic board that is installed into the video recorder enclosure, replacing the standard 110/230 V~ power supply unit. With the alternative power supply unit, an Ajax NVR can operate on a low-voltage power source instead of the facility's power grid. This setup ensures continuous video recording, making it ideal for protecting property with unstable or no power supply.

Hassle-free installation

A professional electrician can install the alternative power supply unit into a network video recorder in just about 10 minutes, using a single PH1 screwdriver and the device manual.

- 12V PSU for NVR is installed directly inside the NVR enclosure, replacing the standard 110/230 V~ power supply unit.
- A standard jack plug is used to connect the power cable.
- A terminal adapter is included in the complete set.

12V PSU for NVR supports two operating modes:

8-16 V==

In this mode, an Ajax video recorder operates within the 8-16 V= voltage range. A jumper should not be installed.

12.1−16 V==

This mode allows an Ajax video recorder to operate on a voltage that exceeds 12 V==. To prevent a full discharge of the power supply, the NVR automatically switches off if the voltage drops below 10.35 V=. A jumper must be installed.

Input with a jumper Input without a jumper Compatibility Connection to mains Operating voltage NVR (8-ch) Operating voltage Socket 12.1−16 V== NVR (16-ch) 8-16 V== $6.5 \times 2.0 \text{ mm}$ $0.26" \times 0.08"$ Maximum current consumption Maximum current consumption Power jack (female) up to 4 A up to 4 A When output maximum current Plug When output maximum current consumption is 2 A consumption is 2 A $5.5 \times 2.1 \text{ mm}$ $0.22" \times 0.08"$ Turn-on threshold when the Turn-on threshold when the Power jack (female) voltage rises voltage rises 12.1 V≕ Connected cable cross-section 8.1 V== In the no-load state In the no-load state AWG 12-14 Turn-off threshold when the Turn-off threshold when the voltage drops voltage drops 10.35 V≕ 8.0 V== In the no-load state In the no-load state
