

Reconeyez SIM

Reconeyez SIM is a hands-off SIM service for your Reconeyez systems. It is available embedded or physical and can be retrofitted to any Reconeyez Bridge. We work with reputable Mobile Network Providers worldwide and charge a competitive monthly fee for the Reconeyez SIM service.

Benefits

Designed for effortless deployment

Reconeyez SIM requires no configuration or activation. Insert batteries into your bridge and start receiving alarm images.

Optimised for real-world reliability

Reconeyez embedded and physical SIMs are industrial-grade and offer advanced diagnostic options. Improve reliability with higher-quality hardware and accelerated issue resolution.

Flexible billing

The Reconeyez SIM fee is only charged when the Bridge has been active in a calendar month. Eliminate unnecessary mobile network fees. Simplify accounting with a single invoice for deployed systems.

No SIM management

Reconeyez SIM management is done automatically when you activate or deactivate a bridge. Never have to suspend or activate a SIM again.

Unlimited IAS Reconeyez traffic

Reconeyez SIM offers unlimited packages for one monthly fee. Arm, disarm, and change schedules as many times as you'd like, without any additional charges. Trigger multiple sirens and Bridge I/O outputs at the same time, even if they are connected to different bridges.

Technical info

Coverage from over 600 carriers in more than 200 countries worldwide

The eSIM provisioning solution leverages proven eSIM technology

The eSIM multiprofile solution is based on the GSMA SGP.22 and SGP.32 SIM specifications
