Monitoreal Announces Integration with Ajax Alarm System

Monitoreal, a global provider of intelligent home and commercial security surveillance systems, has announced its integration with popular intruder alarm system Ajax.

This powerful pairing allows users to create an accurate video detection perimeter around their property, that proactively deters intruders and monitors security events in real time. Monitoreal's AI-based object detection can conveniently be armed and disarmed in tandem with the Ajax alarm, via the alarm's panel and mobile app, offering superior visibility of what's happening around your home or business.

Users can trigger Ajax intruder alarm zones based on Monitoreal's detection of people, animals, vehicles, inanimate objects or a combination of these, in specified areas captured by connected security cameras, at particular times of the day or night. This helps avoid the false alarms that often result from irrelevant movement such as rustling trees, moving shadows, pets and other objects.

Conversely, alarms originating from motion or magnetic sensors connected to the Ajax panel can trigger cameras to deliver Monitoreal snapshots to users, verifying the validity of those alarms.

Monitoreal's customisable rules allow users to control whether an Ajax alarm is triggered automatically, semi-automatically, or manually based on particular detections. They also let home and business owners define the specific areas of their perimeter that are of greatest interest, and exclude insignificant zones such as neighboring properties, bushy areas, and busy roads.

Monitoreal detects much more than just humans. Identifications include 20+ items, such as vehicles, animals, and a variety of inanimate objects, giving viewers the ability to proactively take action to deter intruders with the Ajax alarm, open or close perimeter gates, and control smart light and sound accessories based on real-time alerts.

About Monitoreal

Monitoreal is a global provider of intelligent home security surveillance systems.

Monitor your surroundings in real-time with our AI-based smart object detection. Receive customizable alerts when people, cars, and objects move in the areas that matter most. Prevent intruders by triggering smart audio and light accessories, using rules that protect your home no matter where you are.

Turn your existing or new security cameras into powerful surveillance with Monitoreal, even if they're low-resolution, under poor lighting, or are placed at a distance.

Founded in 2018, Monitoreal is a privately owned company headquartered in Cyprus, Europe, and operates globally. Our devices are designed and assembled in the EU.

Monitoreal. See What Matters.
